

A long-exposure photograph of a city street at night, showing vibrant light trails from cars in shades of blue, red, and yellow. A large, white, stylized geometric shape, resembling a parallelogram with a diagonal cut, is overlaid on the right side of the image. A solid blue chevron shape points towards the bottom right corner.

Everyone home safe, every day.

Best-in-class workplace health & safety
for SAP SuccessFactors.

SAFETY  **SUITE**

Integrating safety into everything you do.

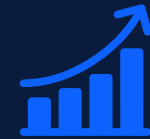

SafetySuite is an innovative, highly configurable solution that supports the evolution of making your workplace safer, ensuring compliance to the ever-changing regulatory environment.

For over 25 years, SafetySuite has worked with Australia's leading organisations, remaining at the forefront of workplace safety, technology integration, SAP, and the evolution of a safety culture.

Our mission is to see everyone go home safe every day. Our customers range from the very large (95,000+ workers) through to smaller niche businesses (200 workers).

We have solutions for the public and private sectors and support every jurisdiction's injury management processes.

SafetySuite is an integrated system that engages the whole business in safety processes, such as hazard recognition, to reduce the number and severity of workplace incidents. By eliminating manual processes and inconsistent data sets, you can obtain end-to-end visibility of safety performance, maintain compliance, reduce administrative overheads and achieve better outcomes for injured workers.

from one integrated,
modular system.**

Safety. Evolution.

A strategic roadmap for the evolution of your workplace safety at a pace your culture can absorb.

Making workplaces safer is an evolution. Successful adoption of a new safety system is essential to realising positive outcomes and efficiencies. Your people have to come on the journey. For 25 years we've worked with Australia's leading organisations to introduce new systems and processes at a pace teams can adopt.

Assessment of Current Practices

Our methodology starts with an assessment of your current practices. We then introduce a baseline system configured to limit disruption, reduce training needs, and gain some quick wins. This may mean disabling advanced features until the time is right.

Personalised Roadmap

We develop your custom roadmap based on a proven sequence of steps that will deliver measurable outcomes and efficiencies at a manageable pace for your organisation.

Industry Enhancements

Unique challenges your organisation may have are passed on to our product design experts who seek out other organisations and industry experts to design solutions. These may then be incorporated into our standard supported version of SafetySuite.

Safety. Integration.

One integrated system that becomes part of how your team does business.

Safety is not something that can be managed in isolation. It touches every function, system and process in your business. Safety is often perceived as a hassle — extra forms, extra systems, extra activities. SafetySuite is the only software designed to be an integrated part of your SAP landscape. This means eliminating duplication, manual processes, and multiple versions of truth.

User Friendly

Our suite of safety and compliance solutions provides intuitive, role-based access for your entire extended workforce, ensuring adoption and full legislative compliance.

Native Integration

SafetySuite's native integration into SAP eliminates manual processes, inconsistent data sets and administration overheads.

Measurable & Accountable

Embedding safety into everything you do makes it an integral part of your workplace culture. This improves employee engagement. With SafetySuite, all team members have clearly defined measurable accountabilities, and managers have real-time visibility of their teams activities.

Safety. Innovation.

25 years of delivering innovative solutions to complex safety and compliance challenges.

The team at SafetySuite are world class experts in Workplace Health and Safety. We are committed to solution innovation, knowledge sharing and remaining at the forefront of the industry.

Industry Insights

We monitor the latest technology, seek to understand industry challenges and talk to experts far and wide to feed into our Product Design Team. Over 50% of our software subscription revenue is invested into R&D.

Cross-Pollination

We invest in the cross-pollination of knowledge between our customers. We share case studies and best practices to continually improve our technology and the way our clients manage safety.

R&D Board

Our Research & Development board is comprised of our forward-thinking customers that meet to discuss strategy, product improvement and legislative change. They bring a wealth of safety knowledge and experience from a range of industries to the design of safety suite. Their guidance ensures our solutions are always highly relevant and timely.

**Don't manage
safety by accident.**

Easy adoption.

Simplicity in Your Hand

SafetySuite's modern, intuitive look and feel is consistent with SAP UI and other SAP business processes. This ensures your users can get up to speed quickly. Your workers can access their safety obligations from anywhere - both on and off your premises. Whether you issue company devices or have a BYOD policy, SafetySuite has you covered. The solution is role based and supports your corporate Single Sign On (SSO) approach to ensure unity.

Compliance to Legislation

Legislation in the ANZ jurisdictions very specifically defines who you are obligated to keep safe. Your duty of care extends to the health and safety of not just your employees (on and offsite), but all others affected by the work you carry out. Importantly, this includes contractors. SafetySuite provides the flexibility to extend your safety management system and processes to all those engaged in your operations without paying a license for every user.

A Pre-Configured Baseline System

Your SafetySuite implementation is initialised with a complete pre-configuration based on 25+ years of business experience. For most customers, this means the system can work for them out of the box, but it's also highly configurable for those unique situations that you need to address now or in the future.

With Advanced Configuration

SafetySuite is highly configurable to support the unique business process you may have. Without needing to be technical, a member of your Safety team can quickly configure new classifications, workflows & escalations or data entry screens. Any challenges your organisation may have are looked after by our product design experts - who seek inputs from other organisations and industry experts to design a solution.

Risk & Hazard
Management.**

Evolve your safety culture.

Closed Loop Workplace Safety

SafetySuite helps you understand your workplace risks and hazards, and plan your controls to mitigate them. It supports creating a programmatic approach to audits, inspections and toolbox talks to ensure engagement in your safety culture.

If a safety event occurs, the system allows you to react quickly, ensure the matter is investigated, identify control failures, and broadcast key lessons through the workforce.

Smooth Injury Management

Easily manage all aspects of workers' compensation claims and injury management cases with processes to ensure the employees journey back to health is as comfortable as possible.

Each claim is progressed through a sequence of standard activities so your obligations as an employer are met. This sequence has been carefully crafted to ensure compliance of the ever-changing regulatory environment in consultation with our clients, insurers and regulators.

SafetySuite processes designed for SAP SuccessFactors

Workplace Safety

- Incident & Event Management
- Risk & Hazard Management
- Proactive Safety Initiative
- Health Monitoring

Injury Management

- Early Intervention
- Workers Compensation
- Rehabilitation
- General Claims
- Litigation

Compliance & accountability.

A State Government department improved their investigation compliance rates by 78% by having SafetySuite monitor and escalate their performance to policy.

Drag and Drop Analytics & Dashboards

Protect your team by making timely decisions based on fact. SafetySuite provides a huge catalogue of operational reports to meet the needs of your people managers as well as comply with legislative requirements. Our dashboards provide you with the key statistical reports that are commonly required at a glance. Metrics and KPI's ensure your focus is on the areas of your business that needs the most attention.

Event Response Tracking

When your team is tasked with a range of activities to respond to an event, it's vital that each task is completed both effectively and in a timely manner. SafetySuite will allow you to track these tasks through to completion and escalate them when they are out of compliance.

An Extensive Library of Escalations & Notifications

Select from an extensive library of standard workflows and escalations that can be activated at the flick of a switch. These workflows have been designed to be easily modified with zero technical knowledge, as well as new notifications created from scratch in just minutes.

Formal Sign-Off & Compliance

Different organisations require a different level of formal sign-off for given safety processes. Perhaps you need two levels of sign-off for a high severity incident, whilst a safety meeting can be conducted with no sign-off at all. You have full control over the level of process compliance

SafetySuite ecosystem.

Partner Community

- Reseller channels aligned with SAP SuccessFactors specialists' partners
- Implementation services
- Level 1 & 2 support

Development & Support

- All product development and support is based out of our Melbourne premises
- R&D Board staffed by local customers
- Level 3 support

Global Reach

- Country versions per demand
- Multilingual
- Multi currency
- Global time zones

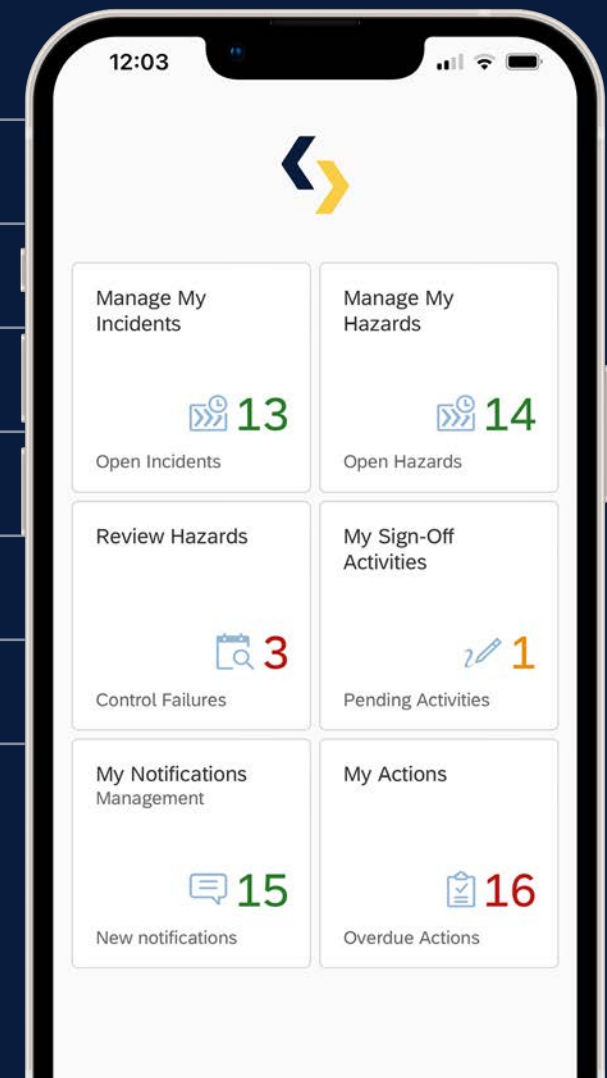

SAP Extension

- Certified add-on for employee central payroll (injury management)

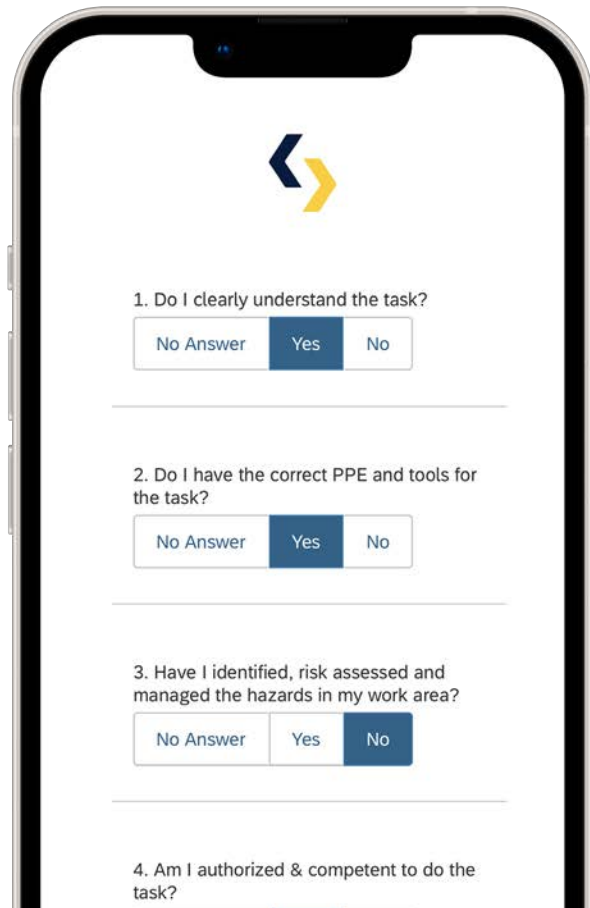

Key features & technology.
