Get proven results from the leading Mobile EAM solution for SAP PM, now on a proprietary no-code platform

Mobilize your maintenance teams for a step-change improvement in your KPIs. Increase wrench time and uptime, lower costs and gain the flexibility to adapt to changing needs quickly.

The Sigga Mobile EAM solution is proven by over 70,000 users in global asset-intensive industries with SAP. The solution is now available on the Sigga Empower platform for faster and easier modifications **without the need for coding.**

SAP® Certified
Integration with SAP S/4HANA®

Results our customers have achieved

Lower costs

$10 M SAVINGS

-82% reduction in work order prep/tech costs

Cut paper and printing costs, increase parts availability while lowering inventory and carrying costs, and reduce staff.

Improved operational efficiency

+10% MTBF

-75% Time spent to solve emergencies

Increase asset utilization, standardize processes for consistent, repeatable actions and more accurate reporting.

Increased productivity

-80% MTTR

+21% Technician productivity

Increase wrench time, cut tedious paperwork and data entry tasks, automate routines, and improve resource allocations.

Cut paper costs and waste

500,000 sheets per month

-10 minutes per workorder

Cutting out paper with mobile devices reduces waste and saves thousands of dollars in paper and printing costs in addition to time-savings to deploy workorders.

Better data, better asset management

Good asset management requires accurate, timely data for technicians, planners, and maintenance managers. Printing, collating, and distributing work orders on paper and then data entry of the work results back to SAP wastes resources, delays information, and is error-prone. Sigga EAM Empower provides real-time, quality data, to improve the productivity and responsiveness of the whole organization.

Deploy and adapt as you go, the Sigga Mobile EAM is a proven solution by over 70,000 users. The Sigga Empower no-code platform has an intuitive drag & drop interface based on maintenance processes, not software codes. It empowers agile teams and super users to modify the app or add new routines with their deep knowledge in their own workflows. Users without coding experience can adapt the solution as needed for evolving requirements overtime.

Data accuracy

Reduce manual data entry and sync data real-time with automated data conflict resolution. The entire workflow is instantly available to all, anywhere on any device enabling visibility to new problems for urgent real-time resource allocation.

Enterprise-scale

For high volumes of data and users, the Sigga proprietary middleware can uniquely provide trustworthy, market-leading performance and stability in the face of high traffic and slow networks.

Online/offline use

The native app enables offline access to data that technicians need in areas without connectivity. Technicians can review workorders, job site details, manuals, parts availability, verify task completion, and even open notifications for issues found. When back online, data is automatically sync'd, and data conflicts resolved without user interruption.

Easy to deploy and scale fast

Many digital transformation initiatives fail due to low adoption, high cost of customizations, app performance issues, and lack of scalability. Do mobile right. Sigga has 20 years of maintenance experience designed into their technology and implementation support. **We know how to accelerate your digital transformation while avoiding disruptions to your operations.**

Gain fast adoption

Deploy and adapt as you go, the **Sigga Mobile EAM** is a proven solution by over 70,000 users. The Sigga Empower no-code platform has an intuitive drag & drop interface based on maintenance-processes, not software codes. It empowers agile teams and super users to modify the app or add new routines with their deep knowledge in their own workflows. Users without coding experience can adapt the solution as needed for evolving requirements overtime.

Mobile-first design

Everything a technician needs for the task at hand is easily accessible from one app, one screen. Plus, the app is designed natively for mobile devices to provide greater usability, responsiveness, performance, and offline use. Data a technician needs to complete a workorder while offline is within the app, even if a new problem is found on another piece of equipment.

No coding needed

Our proprietary no-code integration technology uniquely allows users without any coding experience to complete the final integration step with SAP cutting out delays and extra costs.
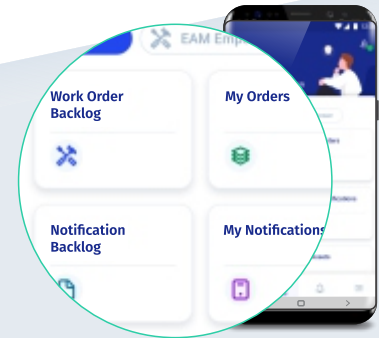

The most complete maintenance solution

[Sigga EAM Empower](#) is designed for field technician maintenance and repair workflows from creating work orders through notifications of job completion. From one mobile app, you can focus technicians on what really matters: simplify the registration and query of data in the field to increase the time devoted to inspections and repairs.

Orders

Execute planned orders, create new orders for immediate service, reserve materials, capture measurement readings, and record time spent.

Notifications

Import SAP maintenance notes, create stand-alone or order-related documents for notes, operations, and measurements.

Measurement

View, create, and share measurement documents and equipment data, online or offline.

Assets

Look up equipment and functional location details. Capture moves or changes to equipment locations.

Specifications:

Deployment:

Sigga Cloud for scalability and low cost of ownership.

Mobile device compatibilities:

- iPad, iPhones for most recent OS versions.

- Android Smartphones and Tablets for most recent OS versions.

- Sigga guarantees the continued compatibility with future versions of mobile devices or operating systems for Android and iOS.

Solution integration environments:

- The platform includes a library of ready-to-use, no-code integrations with SAP PM

- Open and extensible, the platform enables you to create your personal service library importing other native SAP services or creating custom services

- SAP Silver Partner; SAP Certified solution compatible with SAP ERP 6 or greater, including SAP S/4HANA

Networking and Security Features:

- Wi-Fi or cellular data connectivity

- Encryption (HTTPS/AES-256 bits)

- Data management for privacy

- Identity and role-based access controls

- SSO (SAML, Oauth)

- Authentication (AD, SAP User)

- 24x7 Security Operations Center

- Static and dynamic software security analysis

- SAP Certified Solution Best Practices Compliance
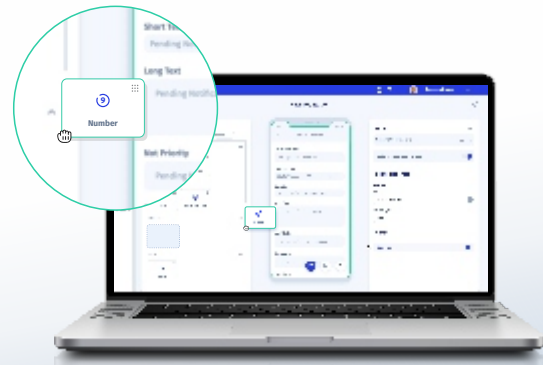

Extend your digital transformation impact

Replace slow inefficient processes to extract or enter data into SAP with Sigga's suite of solutions for optimizing asset-management. Sigga Planning & Scheduling and Sigga Warehouse & Inventory will extend your digital transformation beyond maintenance technicians to planners and warehouse workers to drive end-to-end operational efficiencies.
