# SUPREME PETROCHEM LTD

## CUSTOMER STORY

### CONTEXT

SPL (Supreme Petrochem Ltd), headquartered in Mumbai, Maharashtra, India, is the country's leading manufacturer and exporter of polystyrene polymer. With a market share exceeding 50% in India, SPL is also the largest polystyrene exporter from the country, serving over 93 countries worldwide. Their annual exports currently surpass 100,000 tons. SPL boasts a workforce of approximately 2,000 employees, including more than 250 SAP users.

### CHALLENGE

In order to streamline operations and digitize business processes, SPL decided to migrate from the IBM-I platform with SAP ECC EHP4 to SAP S/4HANA. They prioritized adapting ABAP custom code to the HANA database architecture while ensuring a stable process foundation.

### SOLUTION

Nihilent's solution enabled the deactivation of unnecessary business functions, HANAtization of RICEF (100 objects), and ensured a smooth conversion process with minimal disruption and re-implementation, ensuring a seamless transition for SPL.

### RESULT

The implemented solution resulted in improved system efficiency by reducing data footprint, optimizing business processes with intelligent Fiori Apps, and strengthening cost controls. Adopting SAP S/4HANA further optimized the system with reduced database size and a higher compression ratio.

### CONCLUSION

SPL's migration to SAP S/4HANA by Nihilent streamlined operations, improved transparency, and optimized system performance, resulting in enhanced efficiency, controls, and cost savings for the organization.
