

Case Study

A global SAP rollout resulting in improved performance & consistent operations of the entire enterprise across 3 continents

About the Client

The client is the world leader in dairy products and farming machinery. Founded over 100 years ago, it has over 15 factories worldwide with revenue exceeding €1 billion. The client provides integrated solutions to improve dairy procedures, production, animal welfare, and overall quality of life.

Engagement Snapshot

Industry: Food & Beverage Manufacturing

Headquarters: Sweden

Project: SAP Global Rollout

Team, I want to reach out and say thank you for the great support during our SAP rollout. Your knowledge and assistance with problem-solving were very beneficial and were much appreciated. You were an excellent partner, and I would welcome the chance to work with you again if such a situation arises again in the future."

- Controller NA, supply chain

Business Need

The client, operating across various regions worldwide, faced a complex IT landscape characterized by multiple SAP and legacy software systems supporting their business operations. While they had successfully implemented SAP ECC 6.0 in select European plants, they recognized the need to extend this implementation globally, using a standardized template across all their plants. Seeking a partner to simplify, customize, and centralize their IT infrastructure, the client entrusted the task to YASH Technologies for its time-tested expertise and proven track record in carrying out SAP rollouts at a global scale.

Solution

As a trusted SAP partner with a wealth of experience facilitating successful SAP implementations in Europe, Asia, and North America, YASH addressed the client's challenges and rolled out SAP across their global plant network. Thus, the client embarked on a global SAP transformation journey that would harmonize their plants across 4 countries under one SAP system.

Our solution encompassed key initiatives that included:

- **Global Rollout of SAP:** YASH spearheaded the rollout across the client's plants in China, Sweden, the USA, and Poland. Leveraging our extensive expertise and a standardized template, we ensured consistent implementation methodologies, enabling seamless integration of SAP into the client's operations worldwide.
- **Customization to Local Requirements:** Recognizing the unique needs of each location, YASH customized the SAP implementation to cater to the specific requirements of the client's plants in different regions. This localization ensured the SAP system aligned seamlessly with local regulations, business practices, and industry standards, optimizing operational efficiency and compliance.
- **Streamlined Order Processing:** To enhance operational visibility & simplify order management, YASH implemented a "collective order processing" functionality within SAP. This customization enabled the client to display only finished products, streamlining the order fulfillment process and reducing complexity in their production and supply chain operations.
- **Enhanced Product Tracking:** By implementing serial number functionality within SAP, YASH empowered the client to track the manufacturing history of their products accurately. This improved visibility facilitated quality control and compliance and enabled efficient recalls, warranty management, and customer service.
- **Shop Floor Tracking and Integration:** YASH developed a customized "Shop floor paper" solution to track the status of products at each work center on the shop floor. This solution provided real-time visibility into production progress, enabling effective resource allocation, minimizing bottlenecks, and enhancing overall productivity. We also integrated RF Scanner technology with the host SAP warehouse system, improving inventory accuracy and warehouse management processes.
- **Streamlined Subcontracting Processes:** YASH implemented SAP's "operations and material subcontracting" processes to manage outsourced manufacturing and subcontracting activities effectively. This enabled the client to track the status of goods outsourced to contractors, ensuring timely delivery, quality control, and cost optimization.
- **Custom Reports for Analysis:** YASH developed custom reports within SAP to analyze production, warehouse, and logistics operations. These reports provided actionable insights into key performance indicators, enabling the client to identify areas for improvement, optimize resource allocation, and drive operational excellence.

Benefits

*A uniform SAP landscape
across plants*

*Seamless flow of information
across different business units*

*22% reduction
in TCO*

*Increased visibility
of operations to the
management*

*Improved warehouse
management operational
efficiency*

*Ability to track the
product history with serial
number logic*
