

# **Accelerate Your Cloud Journey: Exploring Migration Capabilities with SAP Integration Suite**

**Craig Stasila, SAP**

**SAP**insider  
**2023**

## In This Session

---

Evolve your enterprise landscape and modernize your integrations by moving to the cloud. Hear how SAP and our partner ecosystem provide tools and resources to elevate your scenarios from SAP Process Orchestration software and SAP Process Integration technology or from SAP BTP for the Neo environment to SAP Integration Suite.

# What We'll Cover

---

- Future-proof your integrations
- Migrate from SAP Process Orchestration to SAP Integration Suite
  - Automate integration regression testing
  - Accelerate your migration with assets, tools, and services from SAP and partners
  - Recent innovations
- Demo
- Migrate from Neo environment to Cloud Foundry environment
- Wrap up
- Where to find more information
- Key points to take home

# Future-proof your integrations

---

# SAP's investment in integration

## A history of continuous innovation

"Integration delivers true business value to our customers ...  
**accelerating the speed of innovation, lowering the risk of**  
integration, and **reducing the complexity** of operations."

**Christian Klein**  
CEO, SAP

CUSTOMER VALUE

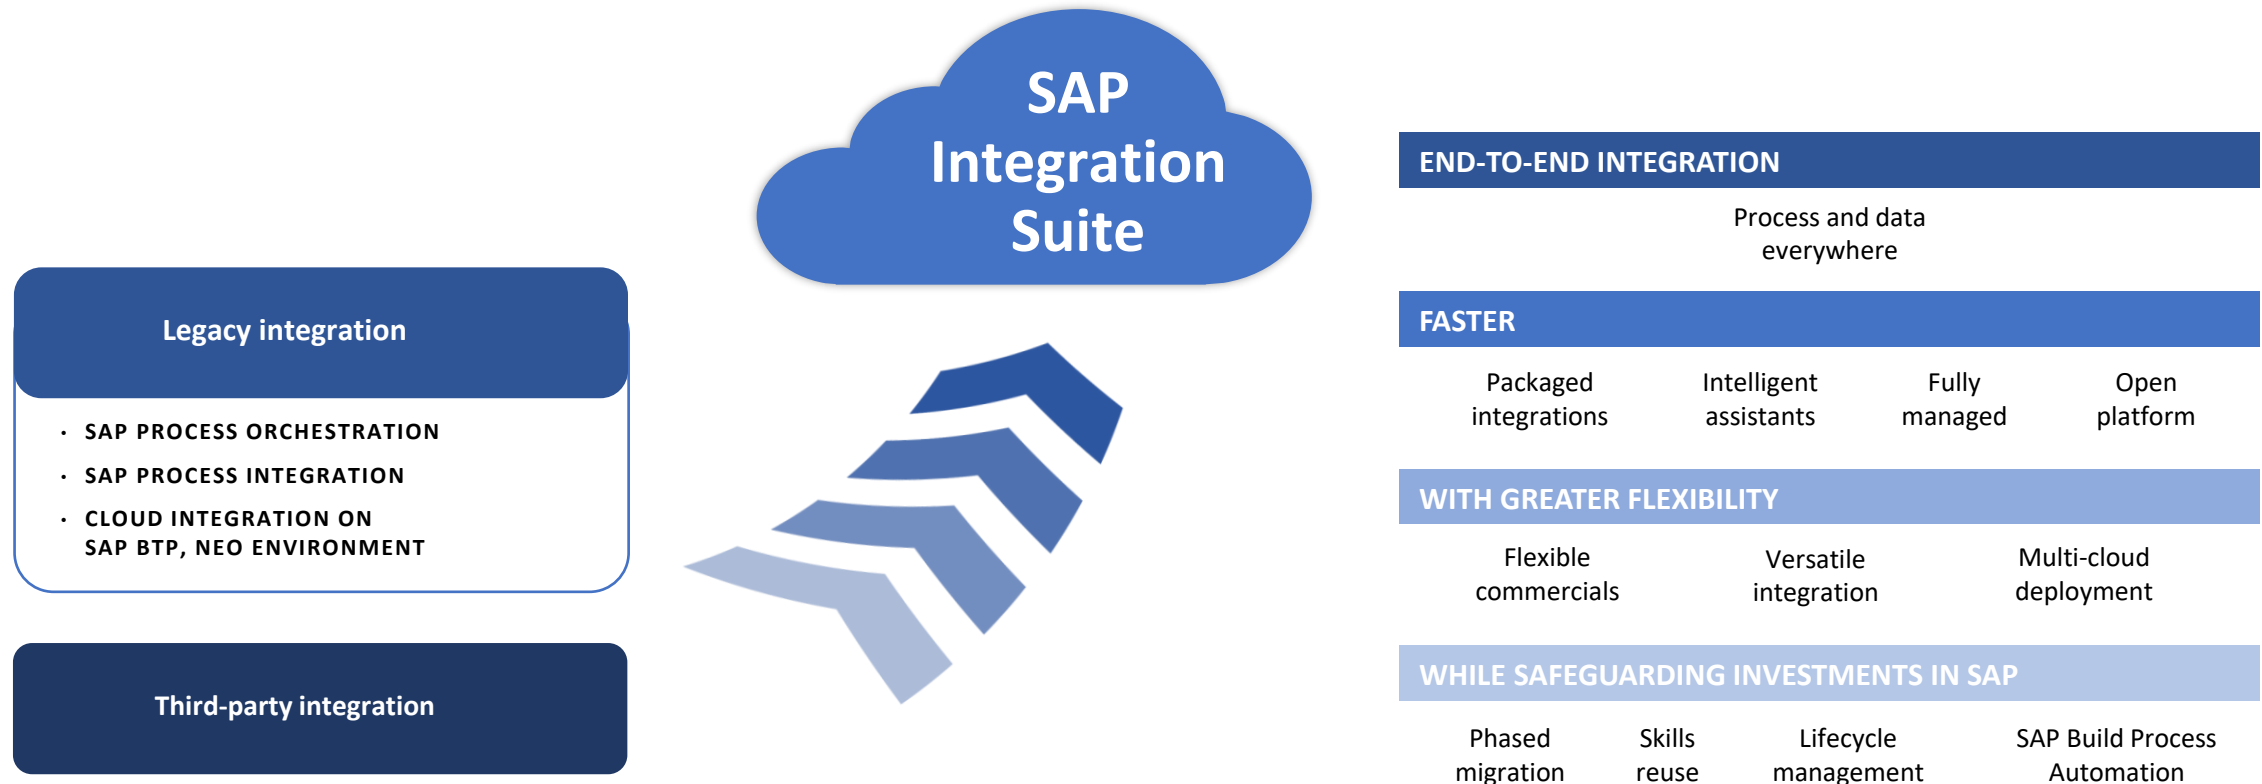

2003

TODAY

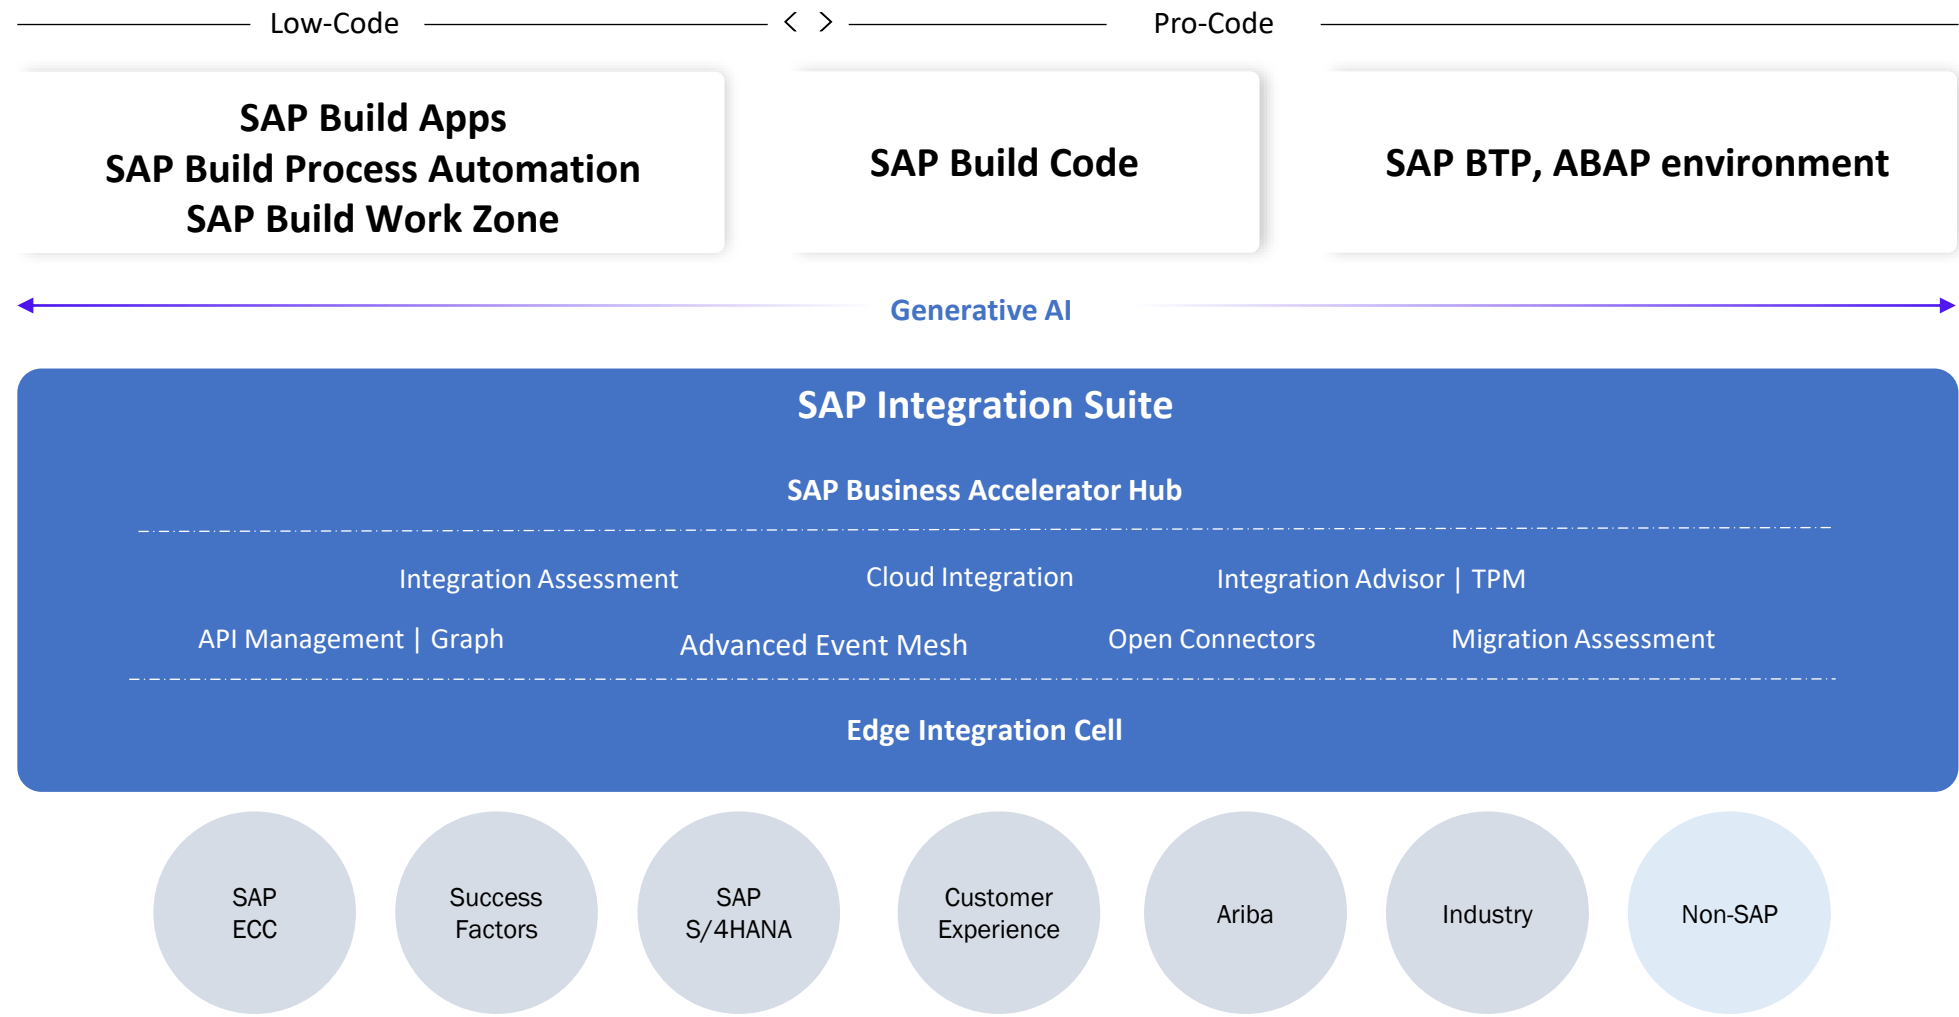

# Modernize integration to power your transformation journey

SAP Process Orchestration will be at end of standard maintenance 31 December 2027. The strategic functional successor to SAP Process Orchestration is SAP Integration Suite.

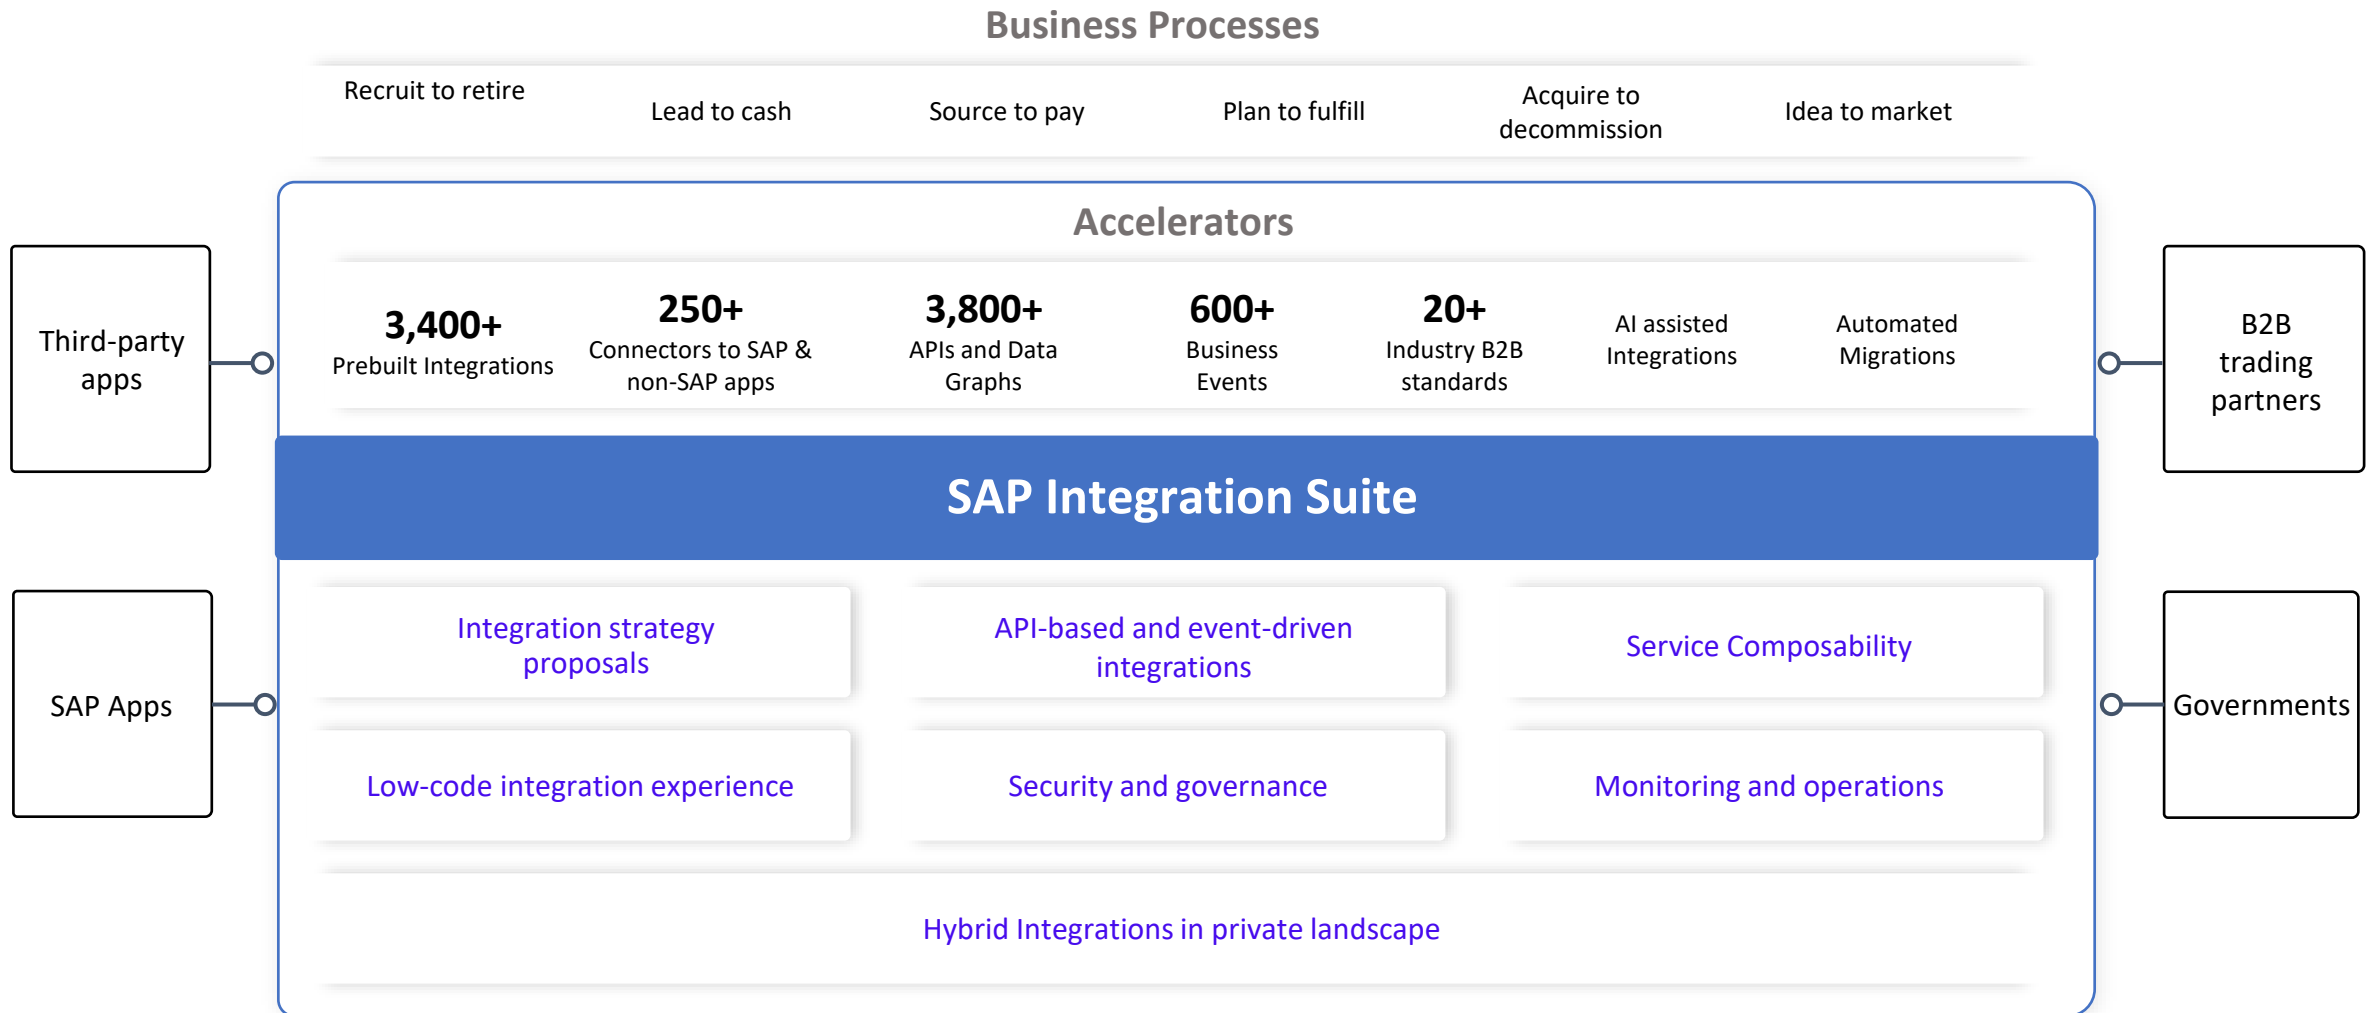

**Simplify and consolidate integration** to achieve end-to-end processes faster at a lower TCO.

# Integration tools on SAP Business Technology Platform

# SAP's hybrid integration platform

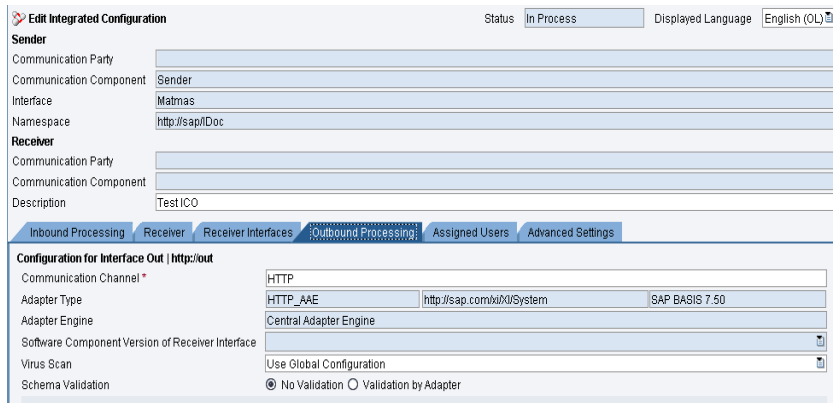

# Migrate from SAP Process Orchestration to SAP Integration Suite

---

# Migration from SAP Process Orchestration to SAP Integration Suite

## SAP Process Orchestration software

The screenshot shows the 'Edit Integrated Configuration' window in SAP Process Orchestration. It features tabs for 'Inbound Processing', 'Receiver', 'Receiver Interfaces', 'Outbound Processing', 'Assigned Users', and 'Advanced Settings'. The 'Receiver' tab is active, showing fields for 'Communication Party', 'Communication Component', 'Interface', 'Namespace', and 'Description'. Below this, the 'Configuration for Interface Out | http://out' section is visible, containing fields for 'Communication Channel', 'Adapter Type', 'Adapter Engine', 'Software Component Version of Receiver Interface', 'Virus Scan', and 'Schema Validation'.

Cloud

# High-level architecture of assessment and migration tool

# How does migration assessment work?

# Migration Assessment capability within SAP Integration Suite

## Assessment categories\*

- Ready to migrate
  - Scenarios match to scenarios offered in SAP Integration Suite
  - Can be moved to SAP Integration Suite manually or semiautomatically
  - Additional configuration steps might be required
- Adjustment required
  - Partially match to scenarios supported by SAP Integration Suite
  - Can be moved to SAP Integration Suite manually or semiautomatically
  - Further adjustments to end-to-end integration process based on best practices are required
- Evaluation required
  - No match or match not known, some items require further evaluation

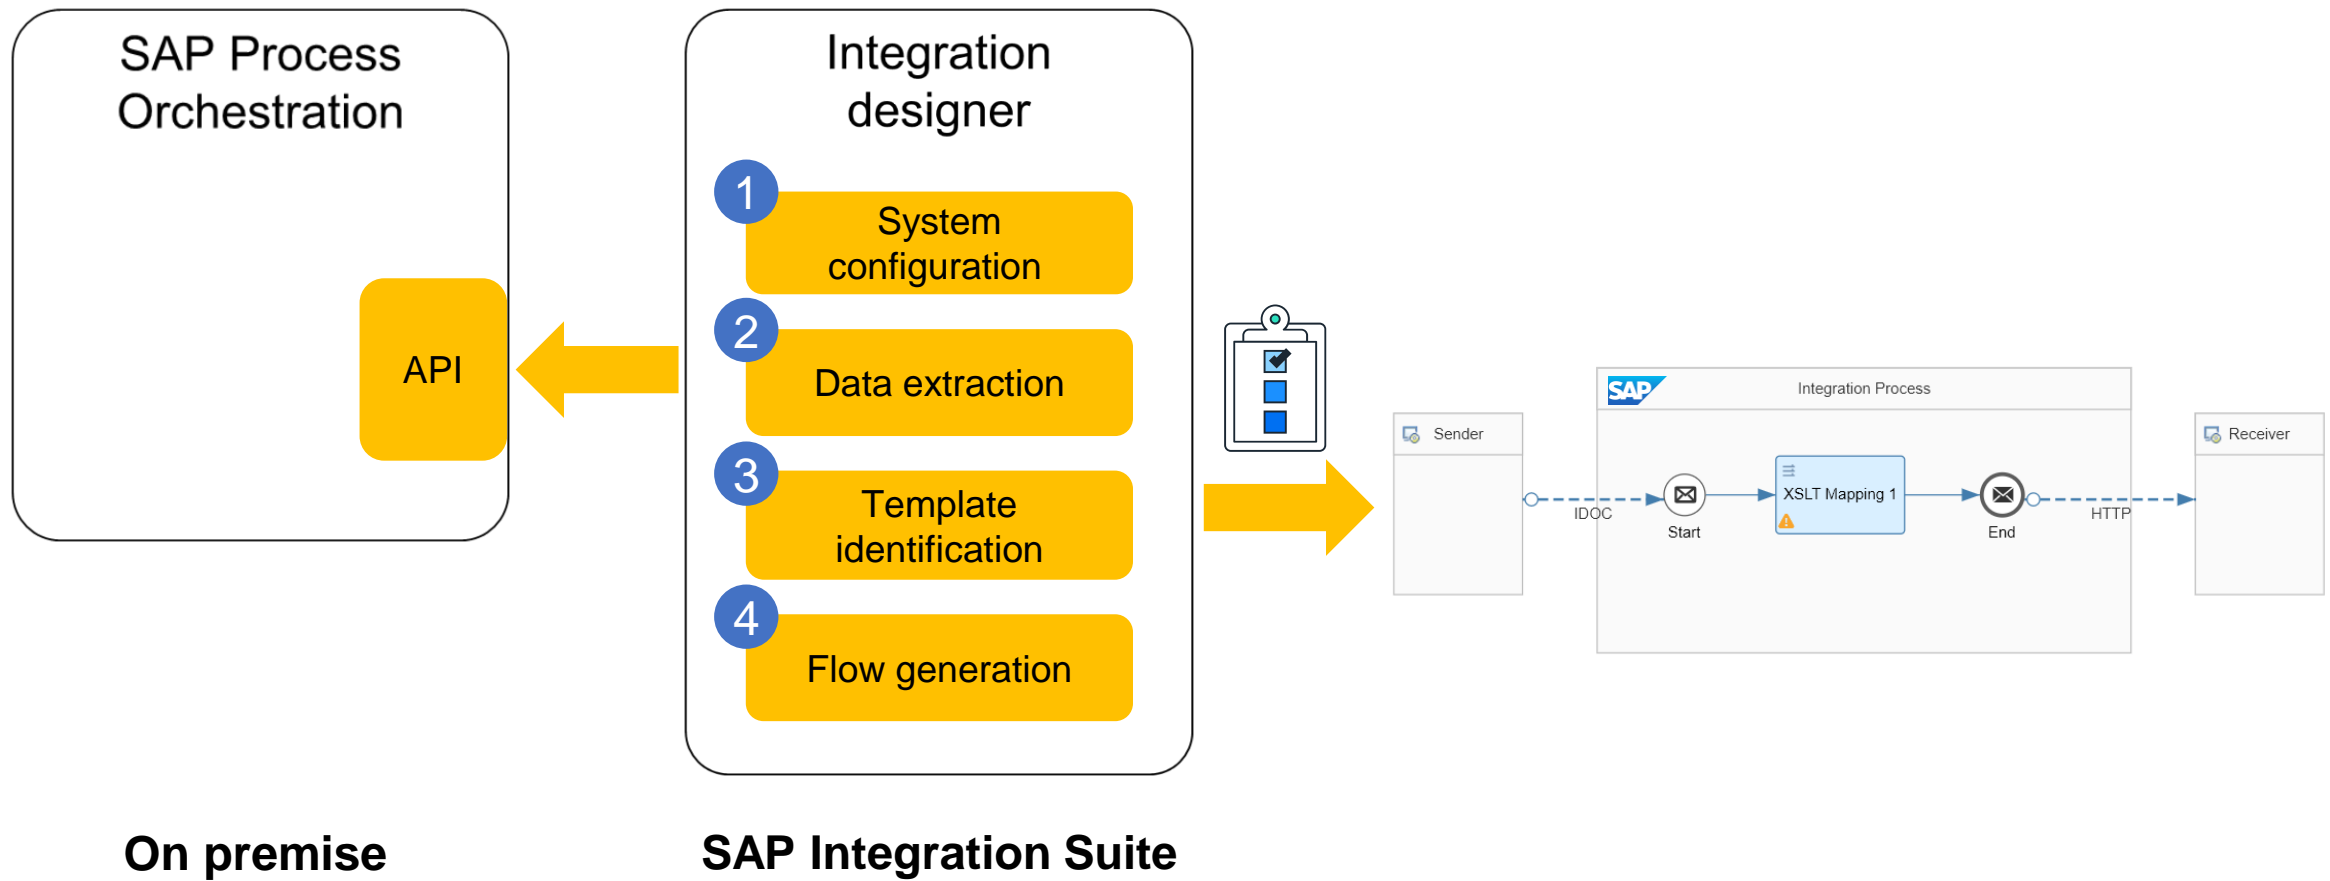

## Concepts

- Data extraction (ESR and integration directory) directly connecting to SAP Process Orchestration software
- Evaluation based on flexible rules framework
  - Set of characteristics reflecting feature parity
  - Each rule has a weight impacting overall migration effort
- Migration effort in t-shirt size and person days
  - Covers technical migration only
  - Based on experience from the field
  - Effort reduction due to similarity of scenarios (learning curve)
- Evaluation results
  - Dashboard, PDF, and Microsoft Excel download
  - Statistics of scenarios by assessment categories, effort estimation, and adapter types

\*NOTE: Assessment category is an indication of the ease of “migratability” and not an indication of what the migration tool can automate

# How does migration work?

# Migration tool

## Concepts

- Migration wizard is embedded in Cloud Integration capability designer
- Integration flows are semiautomatically created based on set of integration flow templates
- Framework automatically identifies fitting template; more than one template can be applicable
- Default template to at least upload mappings incl. message structures
- SAP Process Orchestration software adapter meta data attributes are mapped to channel properties of Cloud Integration
- Manual adjustments such as maintaining security artifacts may be needed after integration flow creation

## Migration supported for following components

- Configuration artifact: Integrated configuration object
- Mode: Synchronous and asynchronous
- Communication Channels: HTTP, REST, SOAP, IDOC, FTP, SFTP, XI, RFC, JDBC
- Events: Message start, message end, timer
- Mappings: XSLT, message mapping including source and target structures
- Converters: XML to JSON, JSON to XML
- More components to be added in future, see [Documentation](#) for more details

Migrate Process Orchestration Artifacts

Receiver Communication Component:

Migrate Process Orchestration Artifacts

Names: 1 Process Orchestration Artifacts 2 Process Orchestration Artifacts 3 Template 4 Integration Flow 5 Review

Receiver Communication Component:

3. Template

1 Synchronous interface with 1 message mapping for request, 1 message mapping for response, and 1 receiver.

Template: P2P\_SYNC\_0001

Previous Next Step Cancel

## Supported Templates

- Point-to-point sync with and without mappings
- Point-to-point sync including JSON conversion
- Point-to-point async with and without mappings
- Point-to-point async variants for different Exactly Once setup
- Point-to-point async including JSON conversion
- Point-to-point async including CSV conversion
- Command message (timer based)
- Message filter
- More templates to be added in future, see [Documentation](#)

## Monitoring

Analyze the usage and performance of your artifacts.

Hour Day Week Month

# Automate integration regression testing

---

# Automate integration testing

Accelerate your migration to SAP Integration Suite **with SAP partner solutions**

Available on  
**SAP Store**

**Testing** is a substantial part of the migration effort and it consumes somewhere around **60% to 65% of the overall migration effort.**

## PARTNERS

## CAPABILITIES

- Automate regression testing of integration flows for migration & beyond
- Complement SAP's automated assessment & migration tooling
- Available on the SAP Store with **with free usage during SAP PI/PO migration to SAP Integration Suite up to 12-months**

## BENEFITS

- **Faster** migration at a lower cost
- **Higher** testing accuracy
- **Reduced** burden on technical and functional teams
- **No** business disruption

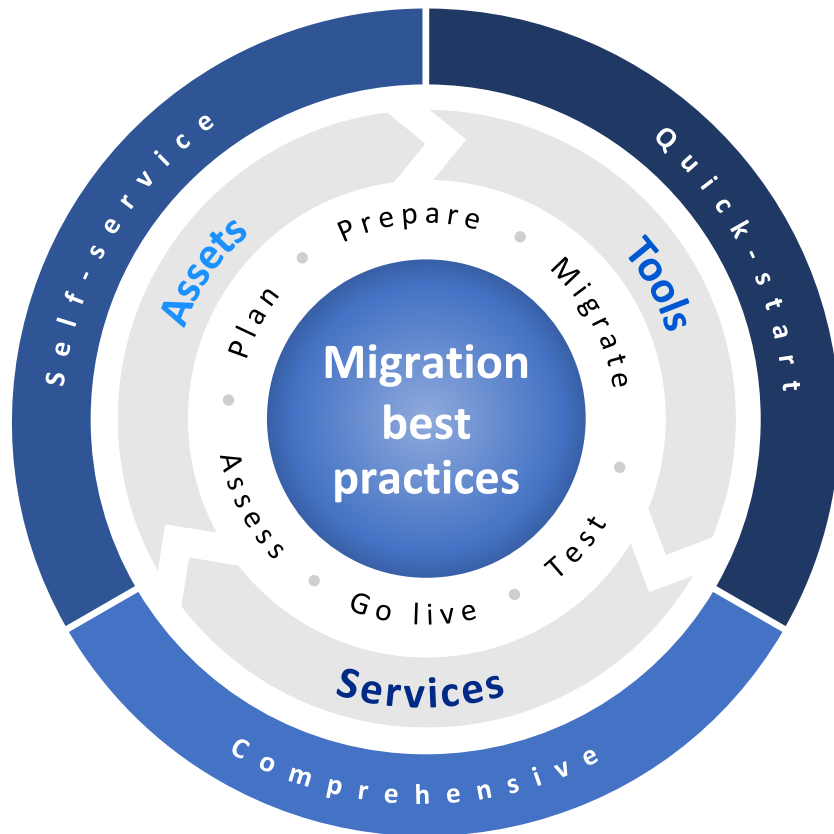

**Accelerate your migration with assets, tools, and services from SAP and partners**

---

# Take advantage of assets, tools, and services from SAP and partners

## SELF-SERVICE HELP

- **Assessment tools** to evaluate your existing environment and estimate efforts
- **Tools to automate migration and testing** from SAP and partners
- **Migration guides, documentation, and community content** to guide you through the migration lifecycle
- **Pre-built integrations** maintained by SAP

## QUICK START PROGRAMS

- **SAP Migration Factory for SAP BTP** – A free 2-to 3-week program to help assess and plan your migration from **SAP Process Integration** and **SAP Process Orchestration** to **SAP Integration Suite**
- **Evolve Neo program** – Free access to SAP experts who help you plan and prepare your migration to SAP Integration Suite on SAP BTP, **Cloud Foundry** environment
- **SAP Service and Support**, offering SAP Integration Suite quick start and migration assistance with **short duration**, **low-cost engagements**

## END-TO-END SERVICES

- **SAP Services and Support** – Tailored services across the migration lifecycle, **including implementation services**
- **Premium engagements** (such as SAP MaxAttention services), offering a customizable deep dive **SAP Process Integration** and **SAP Process Orchestration migration workshop** along with **proof-of-concept**, **health check** and **on-call go-live** support services.

# Recent Innovations

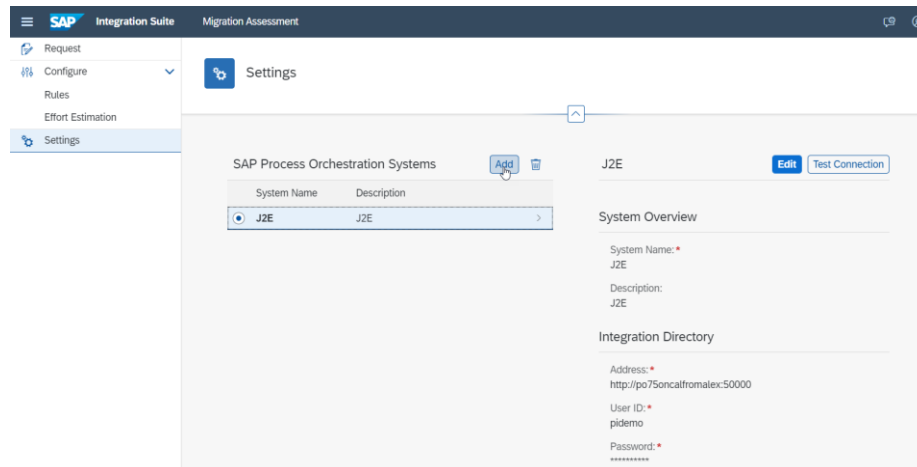

---

# Migration assessment and migration tool – Recent innovations

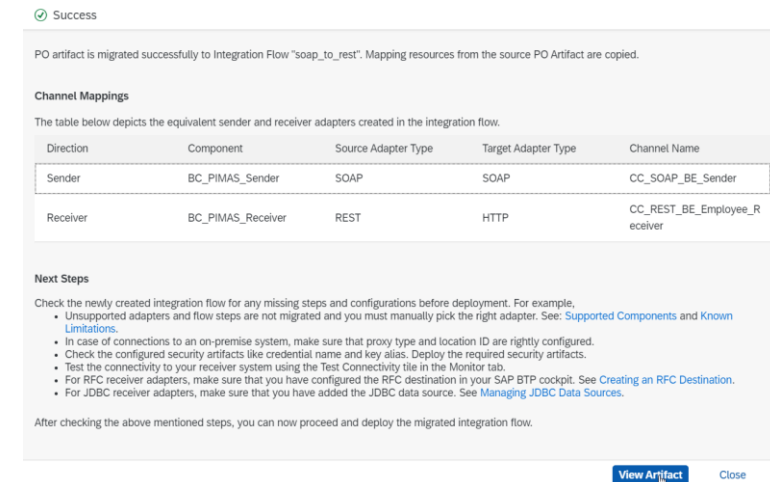

## 1 Migration assessment

- New rules added
- Improved system settings
- Support for older SAP Process Orchestration releases 7.31 and 7.4

## 2 Migration tool

- Summary page improvements
- Further adapters supported: XI, JDBC, RFC, Mail
- Externalized parameters supported and improved migration templates
- Support for older SAP Process Orchestration releases 7.31 and 7.4

# Migrate from Neo environment to Cloud Foundry environment

---

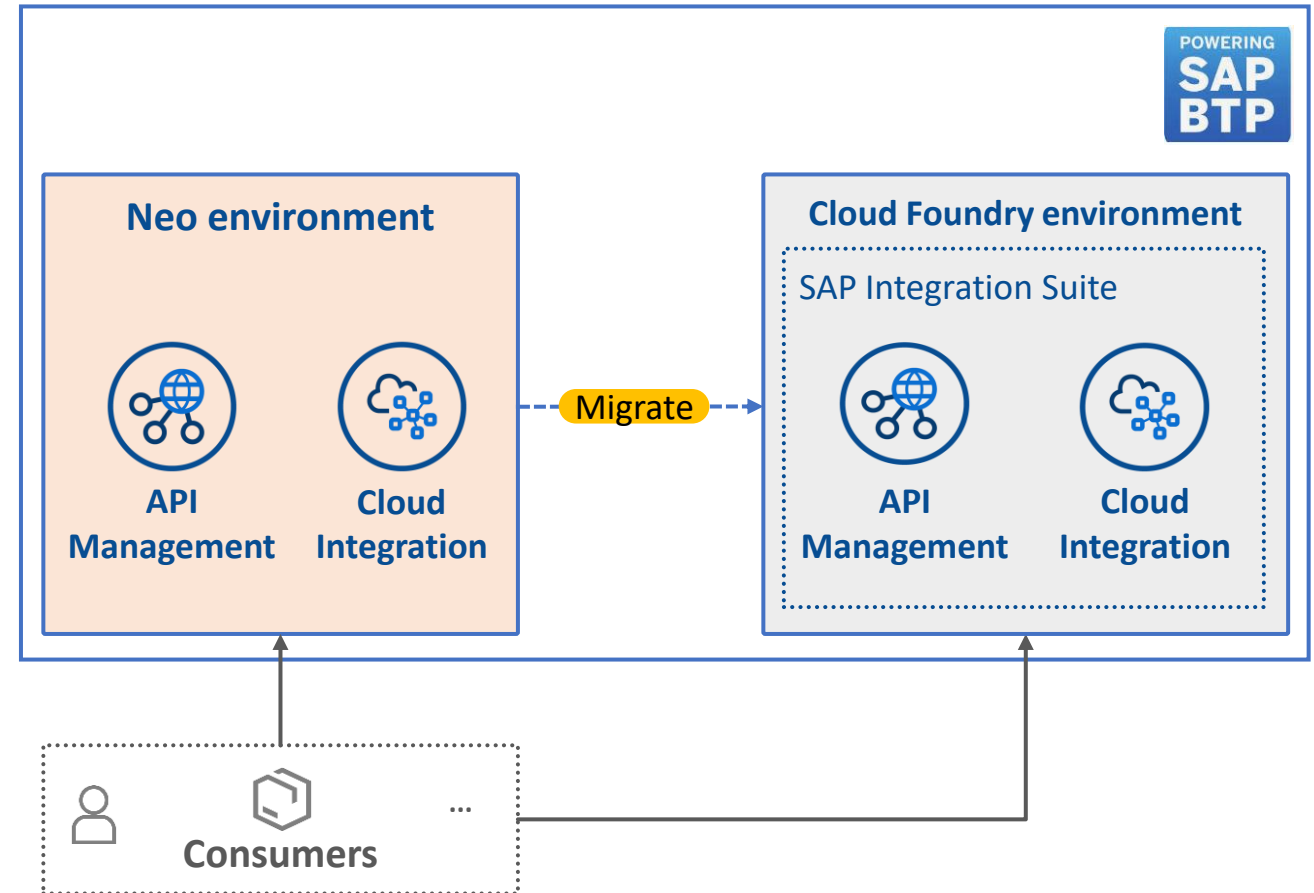

# Migrate from the Neo environment to the Cloud Foundry environment

## SOLUTION

- **Discover** – Perform assessment of existing environment
- **Prepare** – Provision a new SAP Integration Suite tenant
- **Migrate** – Execute deployment process to move integration artifacts from the source system to the target system
- **Validate** – Test the tenant with the migrated content before using it in a production landscape

## BENEFITS

- Self-driven migration
- Planned move in phases
- Minimal downtime

# Fast-track your move using migration accelerators

## In scope for the accelerator

**Cloud Integration** – Custom and prepackaged integration content (unmodified or configure only) including configurations, value mappings, number ranges, local and global variables and data store content, custom tags, public certificates, user credentials metadata, and access policies

**API Management** – API products, API proxies, API providers, rate plans, policy templates, access control permissions for API products, applications, application developers, custom metric and charts, key value maps (unencrypted), measure codes for custom measures, and dimension codes for custom dimensions

## Out of scope for the accelerator

**Cloud Integration** – Sensitive security-related data, message monitoring data, JMS queues data, tenant sizing, message store, partner directory, and known hosts

**API Management** – Certificates, encrypted key value maps, API provider passwords, monetization bills, quota counters, OAuth tokens for API proxy runtime calls, runtime states, configurations like cloud connectors, custom IDP, principal propagation, role assignments, and more

**Accelerator for  
migration of design time  
artifact**

# Wrap up

---

- Integration is the cornerstone to SAP's strategic vision
- SAP is here to help migrate SAP Process Orchestration to SAP Integration Suite
  - Migration Assessment
  - Migration Tooling
  - Automated Testing
  - Professional Services
- SAP is here to help migrate all Neo services to Cloud Foundry
  - Migration Accelerators

# Where to Find More Information

---

## SAP Process Orchestration to SAP Integration Suite

- [SAP Process Orchestration Migration Factory](#)
- [Migration Guide for SAP Process](#)

## SAP Cloud Integration on NEO environment to SAP Integration Suite

- [KB Note 2937549](#) - SAP Cloud Integration for process services:  
Content Migration from Neo Environment to Multi-Cloud Foundation

## Key Points to Take Home

---

- SAP Process Orchestration will be at end of standard maintenance 31 December 2027.
- The strategic functional successor to SAP Process Orchestration is SAP Integration Suite.
- SAP BTP Neo environment will be shut down at the end of 2028.

# Thank You. Questions?
