

## Liquid UI Offline

Liquid UI Offline is a patented solution (#8140617) that lets you **leverage your SAP in the field**, refineries, oil rigs, mining locations and even in the middle of an ocean **without connectivity**. The **data** collected outside of the network connection **gets stored on the device**, and later it is **forwarded to an SAP system** when access to a network becomes available.

## Key Benefits

**Improve productivity** by providing seamless SAP GUI access (even at extreme locations like high-pressure regions or in deep sea locations)

**Increase efficiency** by replacing laborious paper-based procedures (remove paper prints, handwritten entries or error-prone transferring of information)

**Gain performance** with Native Channel Architecture that plugs right into your SAP minus technology hiccups.

## Success stories

59%

Maersk improves operational efficiency by enabling seamless SAP access even w/o connectivity

\$1M

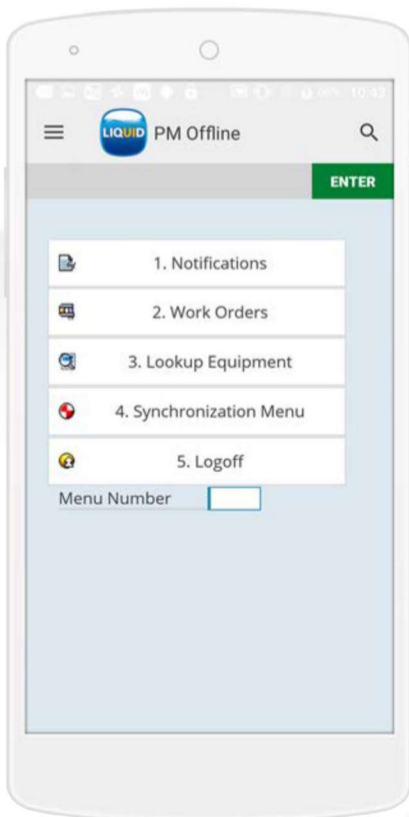

Lufkin saves annually by eliminating paper and phone-based processes

➔ [Source Asset](#)

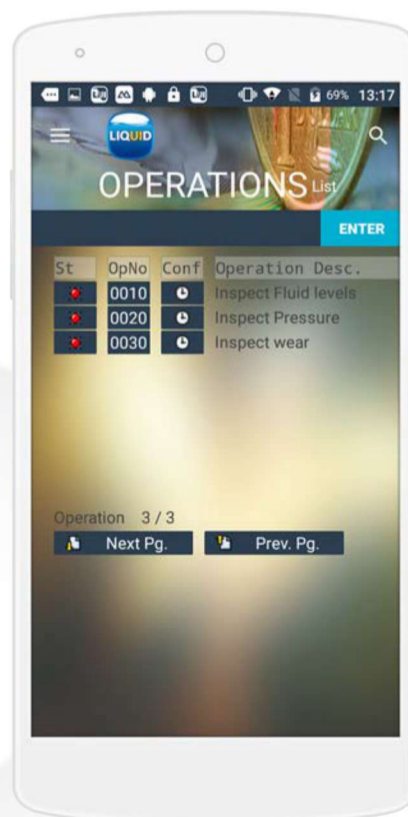

\$90K

Diageo saves annually per employee by streamlining and offlining their SAP PM

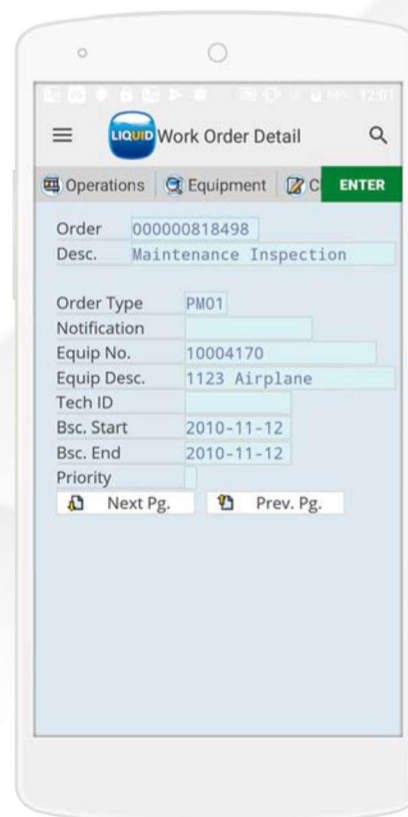

➔ [Source Asset](#)

Role-based dashboards for better operational visibility

Optimized UI functionality to view details for enhanced usability

Eliminated paper-based processes for improved efficiency

# Liquid UI Offline Capabilities

## Seamless SAP connect

Empower your disconnected workforce to have seamless access to SAP where they can create or edit work orders, view service order details, see historical order data, etc. – all in offline mode.

## Convert paper procedures

Streamlined and automate your paper and phone processes for SAP. Thereby helping your field personnel track precise time details, search equipment information or issue goods directly in SAP.

## Store and forward data

A single version of central SAP data. The data collected outside of the network connection gets stored on the device, and later it is uploaded to your SAP system when access to a network becomes available.

## Native channel architecture

Liquid UI Offline plugs right into your SAP minus technology hiccups. Moreover, because it's native, you enjoy optimal SAP performance along with building SAP applications for richer, and a more productive UX.

## Unify SAP access

Reduce your operational costs by giving your users unified access to SAP processes and information, whether they are on land or at sea with a similar user-friendly interface.

## Smart and fast data sync

With Liquid UI Offline, only data which has been manipulated is synced with the SAP server, minimizing network traffic. Additionally, offline data is automatically uploaded to SAP.

## Unparalleled programming methodology

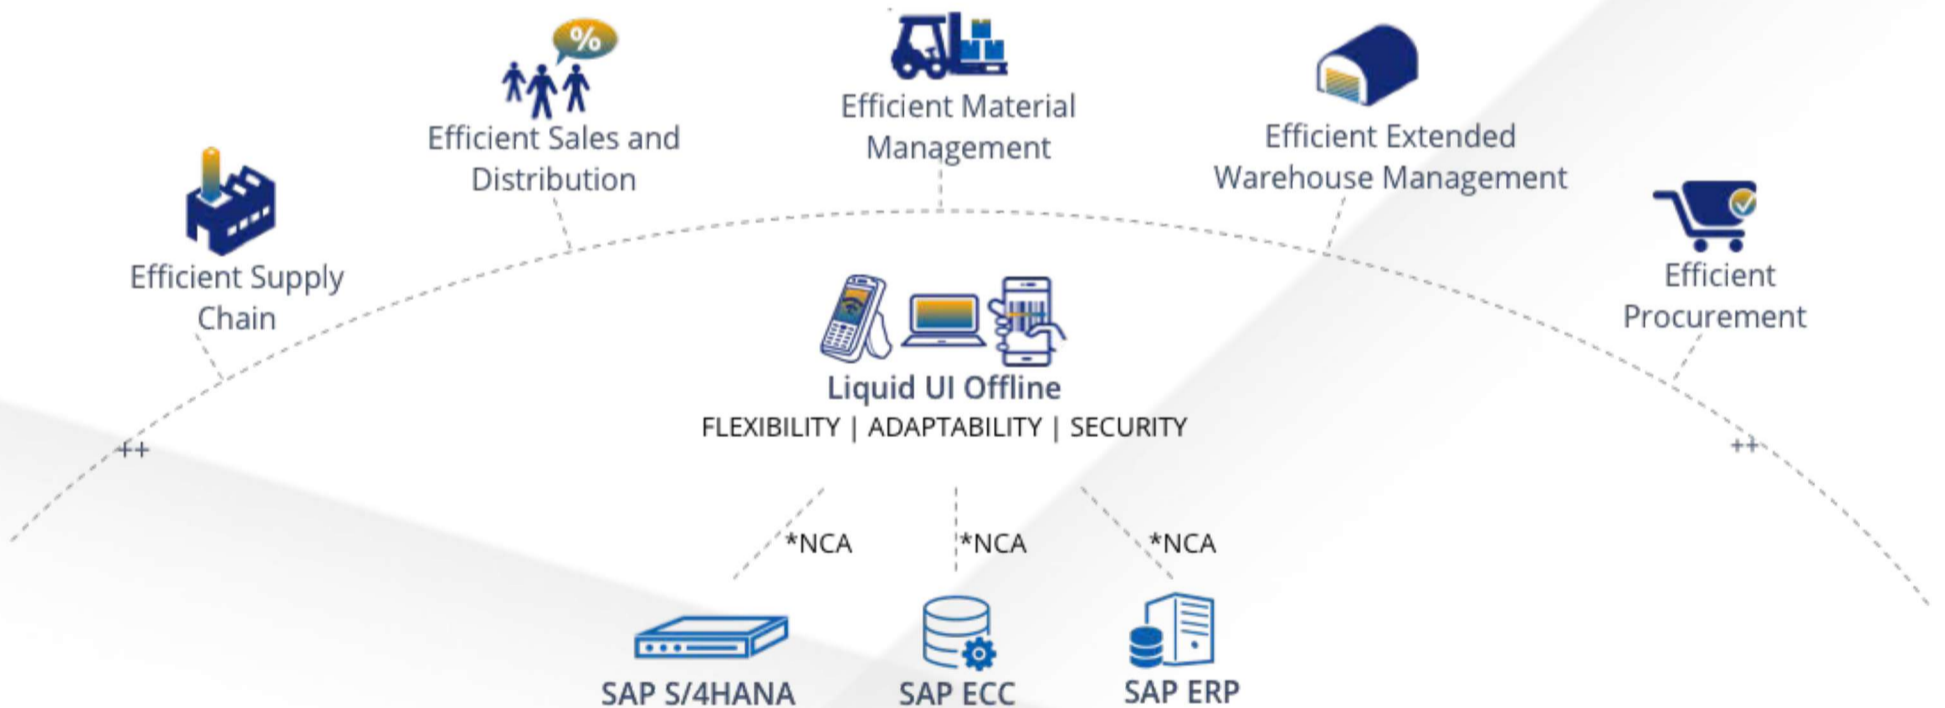

Optimized your development with industrial standard JavaScript – without JAVA or SOAP-based web services development. Liquid UI lets you easily customize your SAP processes for offline use.

## Access data as per your needs

Liquid UI allows long text management for storing more comprehensible data like detailed explanations for inquiries or orders. Also, it enables a drill down selection for easy navigation while selecting a catalog or determining functional location.

# Liquid UI Offerings

Liquid UI is supported on R/3 4.6C and above

\*Powered by Native Channel Architecture

## About Liquid UI Technology

Liquid UI is devised to make your existing SAP infrastructure adaptable to next-generation technology like IoT without reinventing the wheel. You can immediately extend your SAP to Android and iOS without reprogramming. Also, you can flexibly tailor and customize your SAP as per your business needs without rebuilding. Our Native Channel Architecture lets you leverage your native SAP stack and protocol to manifest a robust, deeply integrated, consumer-grade user experience across mobile, desktop or web. Thus making your SAP more robust, intelligent, and secure.
