## Prepare for the Future: Data Management for Reporting & Compliance

Jason Stansberry Vice President & General Manager, PBS Software Americas Inc.

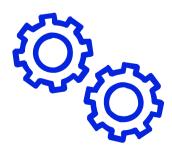

### What We'll Cover

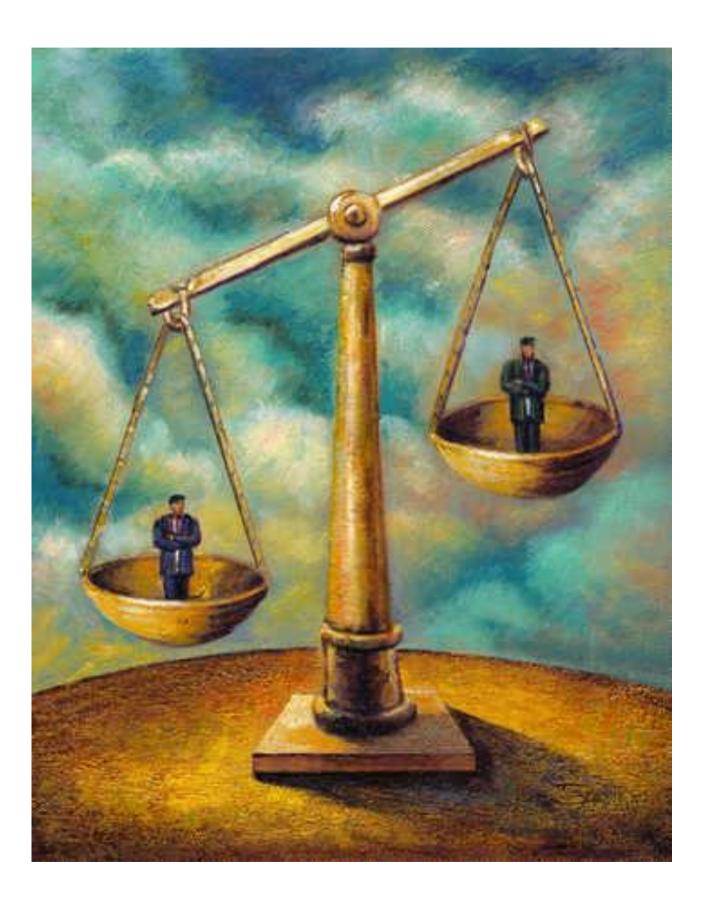

- The Balancing Act of Data Management
- Data Management Concepts
- Common challenges to retain / access data for compliance
- Supporting Tools to Access and Export Archive Data
- Recommendations to get Started
- Wrap-up

### **The Balancing Act of Data Management**

### IT Infrastructure

- Limited by storage / processing capacity
- Additional system resources add cost
- Increasing utilization is causing long run-times for standard reports
- Long lead times to meet audit extract requests
- Increased growth adds risks to future upgrades (ECC / SAP S/4HANA)
- Needs an archiving strategy to slow system growth

### End User Expectations

- End users are concerned about maintaining data needed to work in their role
- I don't want to look in different systems to view current data and archive data
- Companies require full historic data sets to support open audits
- End users don't want a technical view to historic data
- Report / Query responses need to be timely and complete

### Concepts

- Data Archiving The act of moving data from the online system to a long term storage system.
- Archive Object A standard component of SAP environments; Defines the database objects, and corresponding programs, that must be processed together as a single business object. (structured by technical or functional area)
- Business Complete An SAP term describing data that is not expected or required to be updated in the future. Standard archiving requires 'Business Complete' status of records to be archive-ready; a standard control to determine if data can be archived
- Residency period The period of time that must elapse before data can archived
- Retention period The complete period of time data must be retained for legal and governance reasons. After this period of time, data may be purged.
- Purge Physically deleting obsolete data from the storage system and the corresponding SAP links

### **SAP Archive Objects**

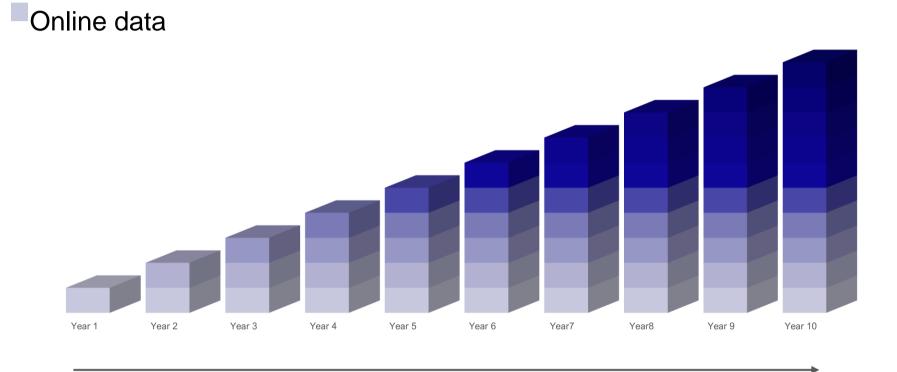

•Over 1,000 different objects are available depending on SAP version and Industry Specific modules (FI Documents, SD Invoices, CO Items, Purchase Orders...) •SAP standard method for safely moving data out of the production database •Example – FI DOCUMNT archiving object (Financial documents) includes the following data from database tables:

- >Document header
- Document segment accounting
- > Document segment control data
- > Posting procedures that depend on company codes
- > Document segment variable data
- > Document segment change data
- >Change documents
- >SAPscript texts

### **Common Data Growth Scenario**

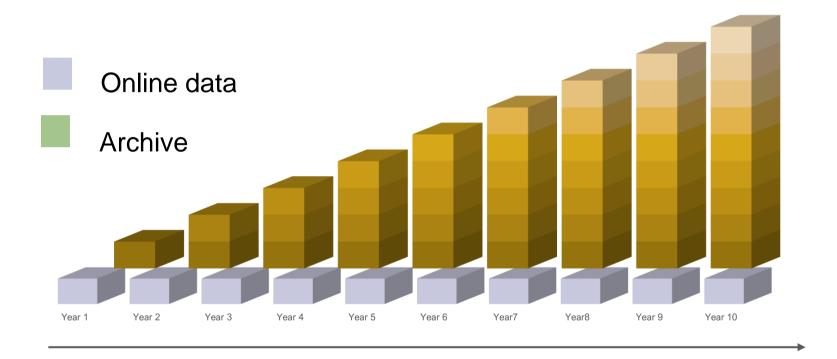

### Without archiving

- Business growth can result in un-managed database growth
- Transaction and query performance / response times degrade
   over time
- Affects structured and un-structured data

### With archiving

- Stabilizes database size
- Improves response time for business transactions and analytics / reports
- Reduce or avoid operation costs

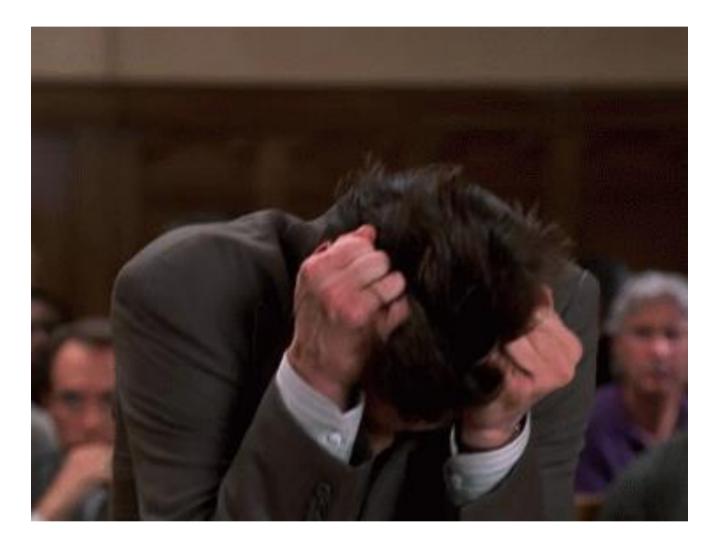

### **Goals of Data Management**

- Reduce the workload for IT systems to process data
- Control or slow the growth of the SAP production database
- Avoid adding data to the production database where it's not functionally / technically necessary
- Safely migrate data from the production system to alternative storage through standard SAP data archiving functionality
- Provide simple seamless access to all data to ensure enduser satisfaction and reporting compliance

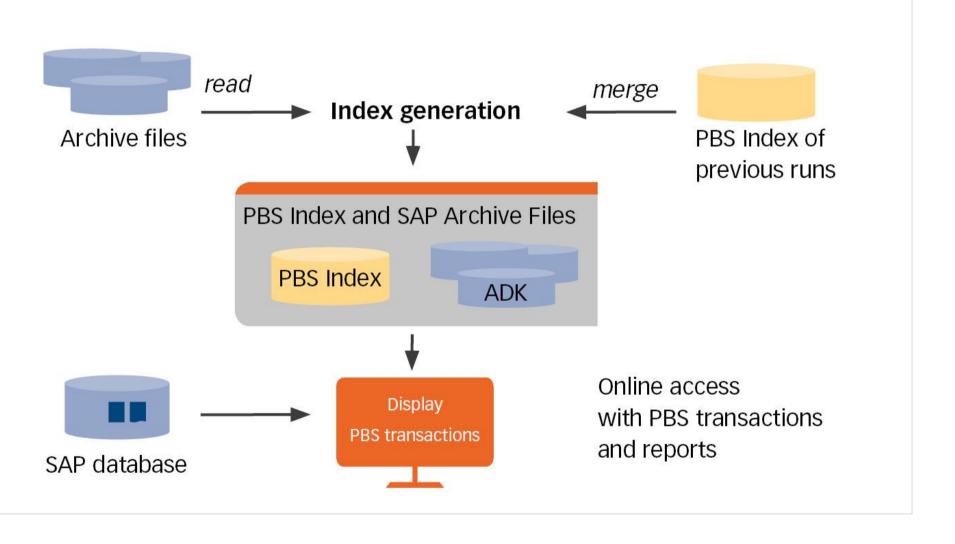

### The Challenge: Why Doesn't Everyone Manage Their Data Volume with Archiving?

- End-users fear they will lose the needed business views of archived-data
- Our company has data retention policies that will not allow us to "delete" information from the database
- "We need detailed data retained for both real-time business transactions and historical reporting (including Audit and Compliance)"
- We don't have the resources with knowledge to do this correctly
- We tried archiving once, and the users didn't like the access options for archive data

### **PBS Archive Add Ons with SAP Standard Archiving**

- PBS archive add ons utilize a lean model that integrates simply into the SAP archiving framework
- Provides comparable response times to archive data vs production data queries
- Supports access to archive data and indexes from cloud or on-premise storage
- Enables enhanced export functionality for combinations of production / archive data

### **PBS Archive Add Ons: Provide Immediate Benefits**

- Users have access to archived data using familiar views
- A visual indicator on the SAP Transaction list / or Fiori Icon shows the end-user they can choose which data they want to access and evaluate:
  - -- Use Online data only
  - -- Use Archive data only
  - -- Use Archive with Online data
- The complete document flow is maintained independent of archive status
- Data is easy to access regardless of status, allowing IT to enable a more aggressive archiving approach

## **Seamless Access**

The CFI Module includes 32 archive enabled Transaction codes.

SAP Standard	PBS	Description
FBL1N	/PBS/FBL1N	Display vendor line items

MB59	/PBS/MB59	Material document list

## **PBS Archive Add ons – Usability**

Through an additional parameter in the list displays, users decide which data is displayed and evaluated:

- Combined display of archive and online data
- >Online data only

> Or archive data only

PBS App with access to real-time and archived data

## Archive add on – Data Export Interface

PBS provides several options for the extraction of application data from SAP environments (typical audit needs). In addition to PBS archive add on specific extraction programs, there are utilites such as the **PBS Data Export Interface** (contained in the PBS CFI delivery):

The **PBS Data Export Interface** enables extraction of SAP application data into external files (AIS format). Archive and database data can be processed.

## Data Export Interface – included in CFI

- 🗸 🚾 Data Export Interface
  - 🗸 🧧 Export monitor
    - PBS/CFI\_FR48 Master data
    - PBS/CFI\_FR49 Transaction data
    - PBS/CFI\_FR39 Customizing data
    - PBS/CFI\_FR43 Master data changes
    - PBS/CFI\_HSSM Audicon Tax Audit HSS Extract Monitor
    - ③ /PBS/CFI\_TXW PBS Extract Monitor TXW structures (DART)
    - PBS/CFI\_FR39N Extraction table user-specifically
  - 🗠 📹 Special extract reporting
    - 🗠 🔚 Financial accounting
      - Open/Cleared items
      - PBS/CFI\_FR42 FI document changes
      - PBS/CFI\_FR53 Balance Sheet /P+L Statement
    - 🗸 🚾 Other
      - PBS/CFI\_FR56 Material stock per posting date
      - PBS/CFI\_FR54 Asset history sheet
      - Ø /PBS/SCU3 Customizing changes
  - 🗸 🚾 Export Viewer
    - /PBS/CFI\_Y90 Administration
    - PBS/CFI\_ALV Reporting
  - 🗠 🚾 Administration
    - PBS/CFI\_FR55 Display export structures
    - ③ /PBS/CFI\_POOL\_ADMIN Administration document infopool
    - PBS/CFI\_XML Generation XML file for Z3 data access
    - PBS/CFI\_Y20 Maximum file size Z3 access
    - PBS/CFI\_FTP FTP Download AIS Files
    - \* Ø /PBS/CFI\_AIS\_DEL Delete AIS Files
    - Image: PBS/CFI\_FR59 Maintenance table pool Z3 data access
    - PBS/CFI\_FR60 Maintenance path/user Z3 data access
    - PBS/CFI\_FR61 Activate additional TXW extracts

- Evaluate your data Identify Risk Areas (free options)
  - Request the Data Volume Management Report from SAP
  - Quick Check Analysis from PBS Software
- Determine areas of largest growth and opportunities to address
- **Evaluate End-User Requirements for Data Retrieval for** archive data
- Determine alignment to future projects (ECC upgrade to SAP) S/4HANA)
- Engage a partner that specializes in Data Volume Management

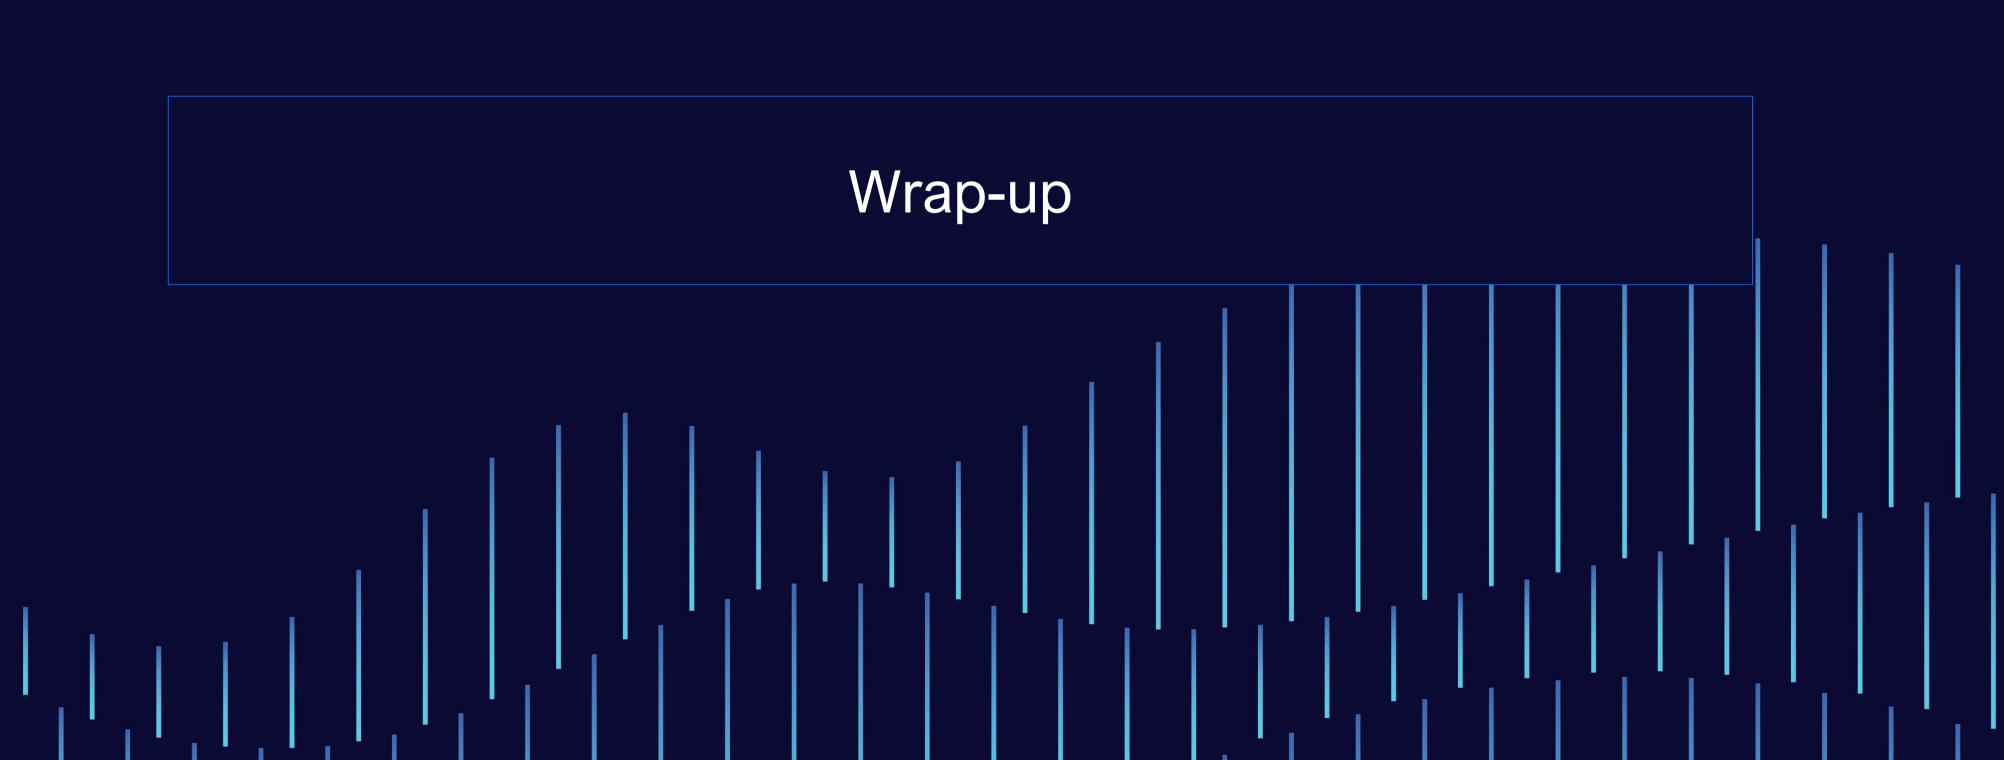

### **Key Points to Take Home**

- Successful data management is a joint effort between functional data owners and IT
- Data Volume Management is essential to supporting business operations and data compliance
- End-user experience for accessing data is key to ensure adoption and successful change management
- Data management is not a 1-time event. It's an ongoing practice in any ERP environment

functional data owners and IT outputs operations and data
