

Modernize AppGRC without the Legacy Headaches

Meet SAP GRC's End-of-Life with Application Access Governance from Saviynt

Now is the time to make the move to a more flexible and extensible access governance solution - one that addresses governance for all applications, not just SAP.

Saviynt Identity Cloud's Application Access Governance (AAG) capabilities are recognized as industry-leading, not only for SAP, but for any application, including AD, databases, and SaaS solutions. Stay ahead of application governance risk with fine-grained integration and control that delivers enhanced security and audit readiness.

Eliminate Silos with Unified Access Governance for All Applications, Not Just SAP

With Saviynt, you don't need multiple GRC access control solutions for separate applications. Saviynt unifies application security models (SAP, Workday, Active Directory, Epic, Salesforce, etc.) under a single umbrella to standardize controls across your environment. Align security policies across applications, devices, and operating platforms for simplified management that identifies and remediates risks and anomalous activities more effectively.

Reduce Risk with Fine-Grained, Cross-Application Segregation of Duty (SoD) Management

Saviynt's deep integrations with ERP, EHR, and other critical applications provides levels of risk detection not available from other solutions.

Proactively assess access requests and prevent SoDs within an application as well as cross-application risks before they occur. Identify and understand potential and actual risks across all applications with out-of-the-box rulesets and controls that promptly see and alert on all toxic conflicts.

Maintain Audit Readiness with Continuous Compliance

Saviynt AAG delivers fine-grained visibility, intelligence, and continuous controls monitoring to help administrators quickly identify access and activity irregularities. Saviynt logs all changes to create an end-to-end audit trail with report creation that allows administrators to slash time on data interpretation while also mitigating risks and building trust with internal/external auditors.

Enable Emergency Access Management and Eliminate Standing Privileges with Just-in-Time Access

Grant users elevated privileges for a limited time and leverage automated session monitoring to provision, record, and de-provision privileged sessions. Session reporting supports documentation and audit preparation. Actionable controls accept and deny non-compliant usage.

Benefits

- Manage all access with a single solution, eliminating silos, and complexity
- Unify security models for simplified governance and better insights
- Maintain audit readiness at all times
- Eliminate standing privileges
- Decrease acquisition, training, and management costs

One Solution for All Access Governance

- Umbrella security model that supports all applications (SAP, Oracle, Workday, Active Directory, Epic, etc.)
- Cross-application visibility SoD management for on-premises and cloud-based applications
- Continuous controls monitoring
- Just-in-time, emergency access management
- License Management

Recognized Industry Leader

- KuppingerCole Compass Leader for SAP and Multi-Vendor Access Control

Intelligently Create and Adjust Access Rules and Roles

Advanced AI and machine learning capabilities analyze access, usage, commonalities, and existing policies to recommend role and rule modifications and rule creation. Quickly identify and remediate outliers with unused or over-provisioned access.

Simplify Administration

The sheer volume of alerts, false positives, and administrative tasks can take their toll on the staff responsible for identity security if they don't have the right tools in place. The result? Limited investigation of violations that increase organizational risk and failures in fraud prevention.

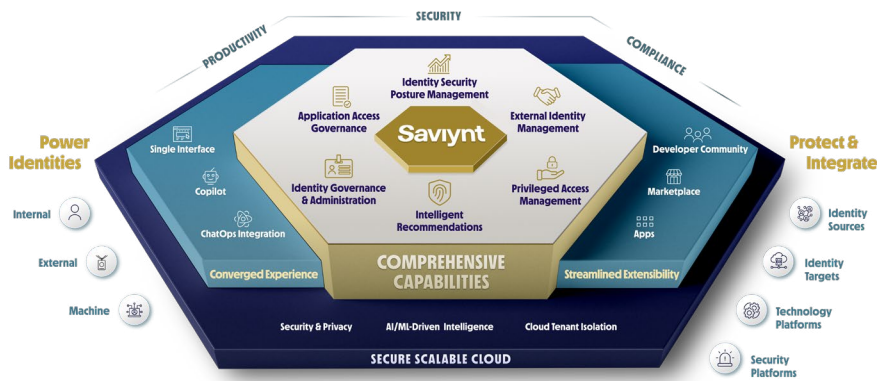

With an intuitive user interface that makes it easy for administrators and end-users to complete tasks, Saviynt AAG provides management delegation and workflow automation, helping organizations stay on top of least privileged access, overall efficiency, and regulatory compliance.

Core Features

- Access Request and Review
- Emergency Access Management
- SoD Management
- Role/Entitlement Modeling Management and Governance
- Continuous Controls Monitoring
- Identity Lifecycle Management

The Identity Cloud combines core identity security capabilities in a single platform that enhances security while reducing costs and management headaches.
