

Asset-intensive industries need reliable master data to increase productivity and improve management of equipment, plants, spare parts, and fleets. Managing complex assets and maximizing their uptime is very challenging if your organization has an “asset gap” in its master data governance.

SAP Master Data Governance, enterprise asset management extension by Prometheus Group, is a native SAP extension designed to close that critical gap in governance, giving you the ability to realize greater uptime, increase wrench time, improve operational productivity, and reduce EH&S risks.

## Key Capabilities

Continuously monitor and manage master data quality with business process metrics and run intuitive reports.

Creates predefined master data models for enterprise assets.

Enables governance of all master data objects, including Equipment Master, Functional Location, Work Centers, Tasks Lists, & MRO Bills of Materials.

Customizable access controls ensure only authorized staff can make changes, with detailed records indicating who made the change and when.

## Advantages

- Increases regulatory compliance with updated asset master data.
- Establishes auditable records of all changes to safety-critical equipment master data.
- Reduces MRO costs by eliminating duplicate records and obsolete/excess inventory.
- Improves maintenance wrench time with accurate and complete spare parts, task lists, and tool requirements.
- Reduces equipment downtime and unplanned maintenance.
- Improves downtime analysis and forecasting with consistent master data nomenclature.
