

Product Sheet

Cadency SAP-Certified Connector

Seamlessly integrate data between Cadency and SAP®

Your Challenge

To gain confidence in the financial reporting, and because ERP systems are not purpose-built for the Record to Report process (R2R), Offices of Finance often handle the close process outside of their ERP — either in purpose-built tools or manual spreadsheets.

This approach significantly limits visibility into the R2R process and introduces innumerable opportunities for misstatement-causing errors.

Our Solution

To help you maximize the value of your ERP investment, Trintech has created an unparalleled pre-built Cadency SAP-Certified Connector.

Now, you will be able to seamlessly integrate and use your financial data in Cadency, the world's only comprehensive System of Accounting Intelligence that weaves all Record to Report activities into a single, centralized process.

With these capabilities, you can easily automate your financial close process that would otherwise require substantial human intervention. Even if you have multiple ERP instances, you'll now have real-time visibility into your financial close within a single console.

SAP® Certified Integration with SAP S/4HANA®

Key Benefits

- Certified by SAP®
- Bi-directional in nature
- Available in the SAP® app center
- Reduce reliance on internal IT
- Deep SAP® SME expertise to help guide you
- Native SAP screens
- Multiple refinement and filter options available
- Integrate multiple ERPs (ECC6, S/4HANA, SAP 4.7) into one system of controls
- •Leverage Risk Intelligent RPATM for risk-based routing and approval for journal entries
- Directly clear transactions in real time in SAP®, removing the need to manually identify and process transactions

Make the Most of Your ERP Investment

Currently available in the SAP® App Center, and bi-directional in nature, Trintech's certified pre-built Cadency SAP-Certified Connector is designed to notably reduce the cost, time and risk of data integration between SAP and Cadency, while still allowing SAP to be your central System of Record.

Once implemented, the Cadency SAP-Certified Connector automatically retrieves the data required for the period-end reconciliation and close process, as well as directly validate and post journal entries.

Ultimately, these capabilities significantly reduce the dependency on internal IT services, from both implementation and maintenance perspectives, as Trintech's internal experts are ready and able to handle even very complex situations and requirements.

Not only will you be up and running sooner, but you'll also be able to remove ongoing support and custom software costs — quickly increasing your organization's ROI with your SAP investment.

Cadency Supports All Data Sources

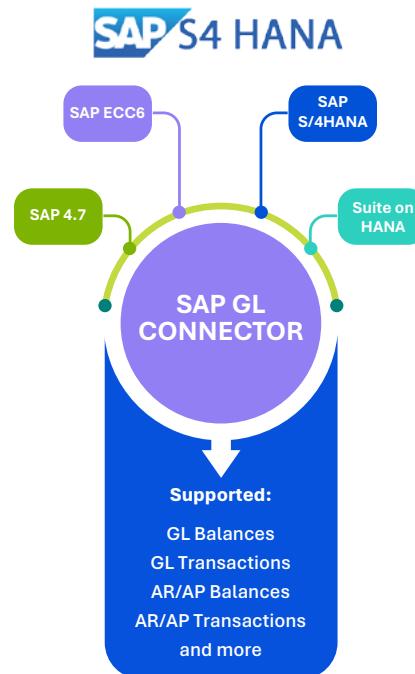

Due to mergers, acquisitions and legacy systems, many companies become encumbered with multiple SAP instances.

Cadency offers the ability to support various instances of SAP and GL systems for complete visibility across all business units' geographies and sources. Additionally, the solution's comprehensive system of controls handles everything from your initial reconciliation of transactions to your final financial reports, and everything in between.

Cadency is ERP-agnostic, offering the ability to support various instances of ERPs and GL systems, including SAP®, Oracle®, NetSuite® and many more for complete visibility across all business units, geographies and sources.

SAP Connector – Process Flow

Scheduler Initiates the connector's aggregation and consolidation process preparing data for extraction
