

Technology consulting

Revolutionize your business with SAP S/4HANA implementation

protiviti®
Global Business Consulting

The right enterprise resource planning (ERP) system is not just about technology—it's a catalyst for business transformation. In today's rapidly evolving landscape, modern ERP systems integrate real-time data, automation, and AI-driven insights to connect all aspects of the enterprise. This enables smart decision-making, agile operations, and business collaboration.

Unlocking business alignment and potential

Implementing an ERP system goes beyond deploying new technology; it requires careful planning, active stakeholder involvement, and precise execution to avoid pitfalls like budget overruns and project delays. Key challenges include ensuring the ERP system aligns with “best practice” business processes, facilitating smooth data conversion, and managing necessary organizational changes, as well as:

- **Complex system integration:** Integrating ERP systems with existing IT infrastructure often disrupts operations.
- **Data accuracy and conversion:** Accurate data conversion is crucial and can lead to costly delays if mismanaged.
- **Change enablement:** Organizational resistance can impede new system adoption without effective communication and stakeholder engagement.
- **Budget overruns and delays:** ERP projects frequently exceed budgets and timelines, straining resources.
- **User adoption and training:** Inadequate and poorly designed training can result in low user adoption rates and inefficiencies.

70%

of ERP implementations fail to meet their original business goals*

37%

of organizations are not confident that their technology infrastructures are sufficiently modernized to address disruption risks**

Protiviti's support across your SAP S/4HANA journey:

Strategy & roadmap development

- Phase 0 assessment
- Roadmap and deployment strategy
- Data readiness assessment
- Program governance support
- SAP S/4HANA Cloud public vs private assessment

Business transformation

- SAP best practices fit assessment
- Organization impact and change readiness assessment
- Business process improvement
- Process modeling (Signavio or Celonis)
- Digital transformation assessment

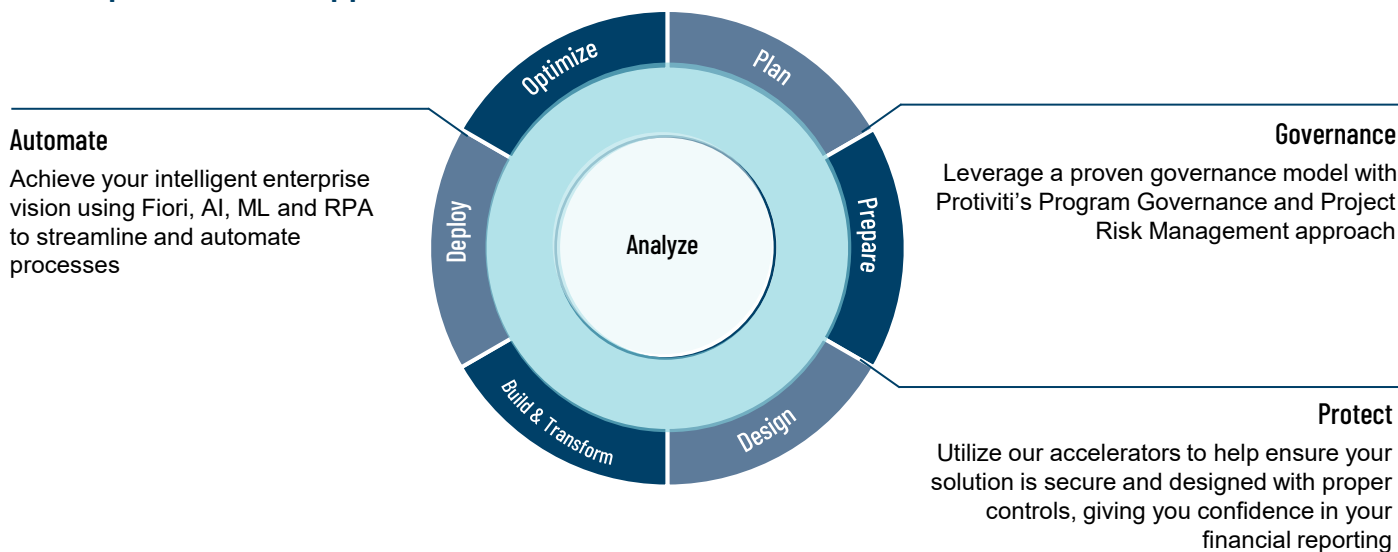

Implementation services

- New implementation (greenfield)
- System conversion (brownfield)
- Selective data transition (hybrid)
- Workstream support (data and analytics, security & controls, change enablement)
- Post-implementation optimization

Governance & oversight

- Program governance
- PMO support
- Third-party oversight
- Risk management/quality assurance
- Post implementation audit

Our implementation approach:
