

Worksoft Connective Automation Platform

Built for Continuous Enterprise Change

Worksoft delivers the only platform purpose-built to automate the full lifecycle of enterprise testing across business processes, data, change, and execution. With the Worksoft Connective Automation Platform 2026, aligned testing to enterprise change by connecting impact analysis, adaptive automation, intelligent prioritization, secure test data, and executive reporting into one unified architecture across SAP and interconnected enterprise systems.

This isn't just test automation.
It is smarter control.

Why It Matters

Enterprise testing still breaks under pressure. Data isn't ready. Test coverage is unclear.

Test execution runs without prioritization. Leaders lack visibility into true risk posture.

Teams are forced to choose between moving fast and protecting business continuity; a trade-off that no longer works in environments of constant enterprise change.

Worksoft 2026 connects processes, automation, data, and change into a single intelligent platform so testing aligns to business impact, not execution volume.

What It Does

Worksoft Connective Automation Platform spans the full validation lifecycle with embedded intelligence at every stage:

- Capture real business processes to ground automation in operational reality
- Deliver resilient, codeless automation across SAP and enterprise applications
- Prioritize execution based on business impact and change signals
- Map downstream change to test coverage before execution begins
- Provision secure, production-like SAP test data through Worksoft Data Connect
- Translate results into executive-level readiness and risk insight

Built for enterprises that work across multiple business applications, Worksoft supports SAP and interconnected applications across CRM, HCM, finance, mainframe, web, and custom applications.

What's New in Worksoft 2026

The 2026 release strengthens intelligence, resilience, and governance across the platform.

Intelligent Failure Diagnosis & Explainable Testing

Pinpoint root cause in seconds and summarize test results with AI-powered analysis.

Impact-Driven Testing at Scale

Deeper cross-system visibility strengthens risk-focused validation before release.

Worksoft Data Connect

Secure, production-like SAP data delivered in minutes, enabling compliant, high-coverage testing.

Enhanced Adaptive Automation

Dynamic self-healing reduces test brittleness as systems evolve.

True End-to-End, Multi-Application Process Coverage

Validate complete business processes across applications to ensure critical workflows perform as expected.

Parallel Reporting at Scale

Generate executive-ready reports rapidly across environments.

AI is embedded across the platform to reduce noise, strengthen prioritization, and translate execution into business context. It enhances human decision-making. It does not replace it.

Why Worksoft

- Purpose-built for enterprise complexity
- Intelligent, impact-driven validation architecture
- End-to-end automation with no-code scalability
- SAP-certified and application agnostic
- Built for governance, not just execution
